

BANKING AND THE SOCIAL CONTRACT

*Mehrsa Baradaran**

INTRODUCTION

"[Government] support cannot go on forever, which underlines why the Social Contract for banks must be redrawn."¹

- Paul Tucker, Deputy Governor of the Bank of England

Paul Tucker made a prescient comment while perhaps unintentionally coining the perfect terminology to describe the current problem in banking: the social contract between the government and banks is out of balance, due primarily to the increased size and power of a number of banks. This Article will, for the first time, describe the social contract in banking and explain how it has gone awry. The recent financial crisis provides a compelling illustration of my argument. In 2008, Treasury Secretary Henry Paulson sold the Troubled Asset Relief Program (TARP) to Congress and the public as an undertaking that would help relieve Americans' mortgage debts through modifications and other direct relief. Congress passed the Act, and Henry Paulson immediately took advantage of the broad discretion given to him under TARP to inject billions of dollars directly into the country's largest banks by purchasing preferred shares.² Paulson reasoned that this was neces-

2 NEIL BAROFSKY, BAILOUT 25 (2012).

sary to allow these banks to start lending again. However, the deal struck with the banks provided no requirements or incentives to actually increase lending.³ Once the banks had money in hand, it became apparent that they had no intention of using the funds to facilitate credit.⁴

In response to the voiced outrage of several Congressmen and public figures over the diversion of funds from the public to the banks, the Treasury Department proposed and Congress approved another program in March 2009. The Home Affordable Modification Program (HAMP), a \$50 million TARP carve-out, would go directly to homeowners and fulfill the original purpose of TARP by restructuring mortgages to make them more affordable and decrease the number of foreclosures.⁵ Incredibly, these funds also ended up going directly to banks. In fact, HAMP's faulty design caused many problems for mortgage borrowers across the country. When Treasury Secretary Timothy Geithner was asked about HAMP's failures to help mortgage borrowers, his response was one of most telling exchanges of the financial crisis: "We estimate that [the banks] can handle ten million foreclosures, over time This program will help foam the runway for them."⁶ When asked about the one program that was specifically targeted to help the American public, the Treasury Secretary responded that it would make banks more profitable.⁷ This revelatory comment is at the heart of the misunderstanding that has pervaded American banking policy for the past 30 years.

The misunderstanding concerns the nature of the relationship between banks and the state. One consequence of the confusion is the Treasury's assumption that the government's paramount objective is assuring bank profitability. To be sure, regulators should work to secure a profitable and successful banking industry, but bank profitability is a means to an end and not an end itself. The proper end is ensuring that the nation's banks do what the public needs them to do and not the other way around.

The public needs a safe and reliable banking system, without which the economy cannot reach optimal performance. Banks also need government support, without which their customers would lack sufficient trust to permit them to function properly. Thus, banks and the government are engaged in a partnership or agreement. The basic agreement consists of a government promise that it will protect banks from runs, liquidity shortages, and investor irrationality, and a promise made by banks that they will operate safely, play their essential role in financing the expansion of the economy, and serve the

needs of their customers and local communities. This arrangement has been effective for much of U.S. history and is still intact with regard to most U.S. banks, but it has fallen apart with the largest and most powerful banks, those that have been called “Too Big To Fail.”⁸ These banks make up less than one percent of the banks in the country, but control the majority of the country’s banking assets and wield a disproportionate amount of political power.⁹

It is these banks that were most involved in unsafe practices and these banks to which the various bailout measures were directed. These large banks are the banks in which the U.S. government is most invested, and yet these are the ones least invested in the public welfare of the country. This is why the social contract must be re-asserted. Populist movements from the right and the left, such as the Tea Party and Occupy Wall Street, have demonstrated, although sometimes vaguely, the people’s unease with the current state of the social contract.¹⁰ President Obama has gone so far as to tell Wall Street firms that he is standing “between [them] and the pitchforks.”¹¹

The recent crisis made clear that bailouts were economic and political necessities and will likely always remain necessities so long as large and systemically dominant firms exist. Therefore, the government will also continue to stand “between [the banks] and the pitchforks.” Both sides need to recognize this inevitable relationship. At the same time, the government must reassert and clarify the essential nature of this relationship and demand the reciprocity on which this social contract is premised. In particular, the government must make clear that in exchange for this necessary and continued support, the government will require certain banks to fulfill obligations for the benefit of society.

There is a long and rich philosophical discussion about the social contract between individuals and society. In general, social contract theory posits that individuals consent to surrender some natural liberty in exchange for protection or other benefit conferred by society.¹² This Article does not intend to wade into social contract theory as applied by Hobbes, Kant, Rousseau, Rawls, and others to the individual and society.¹³ However, the rela-

12 See J.W. GOUGH, THE SOCIAL CONTRACT 140 (2d ed. 1957).

13 Hobbes’s explanation of the social contract begins with the “state of nature,” wherein every individual has complete freedom and acts purely in his own self-interest.

tionship between the government and banks resembles a social contract because it involves the sacrifice of certain liberties that individuals make for the protection of the state. Here, banks gain specified protections from the government in exchange for operating within the limits of the law, much like the average citizen must do in order for the state to function properly. Acknowledging the social contract does not necessarily require more regulation, especially not of the most complex and costly kinds. It requires instead a new way of viewing the relationship between banks and the state that fully recognizes the obligations on both sides.

This Article asserts that there are three major tenets of the social contract: (1) safety and soundness, (2) consumer protection, and (3) access to credit. Regulators can and should require banks to meet standards in these areas to benefit society even if these measures reasonably reduce bank profits. Implicit in the social contract is the idea that each party must give up something in the exchange. This Article provides policymakers not only the appropriate narrative and justifications needed to frame their regulatory philosophy, but it also provides important textual support from the most prominent acts of banking legislation to give regulators the authority and charge to ensure that banks fulfill the public's needs.

In Part I, this Article provides a historical background of the social contract and demonstrates that the social contract between banks and the government has existed since the inception of banking in this country and has changed several times to meet changing circumstances and needs. In Part II, the Article describes the various governmental measures that protect banks and essentially serve as a safety net and why this government support justifies imposing public obligations on banks. Part III defines the critical elements of any social contract going forward, such as safety and soundness, consumer protection, and access to credit. Part IV demonstrates how regulators can build on existing language and tests in banking legislation to recognize and enforce banking's social contract.

Because this state of nature is intolerable, individuals agree with each other to surrender complete liberty in exchange for a society ruled by a sovereign authority. THOMAS HOBBS, *LEVIATHAN* 192 (Penguin Books 1986) (1691). Locke's state of nature includes a natural law, which contains a right of property. Individuals agree with each other to give up their right to enforce this natural law to the society. The society establishes a legislative authority whose role is to enforce the natural law for the benefit of the people. Rousseau regarded the social contract as an agreement among individuals to surrender their natural liberty. Ernest Barker, *Introduction to SOCIAL CONTRACT*, at xix, xxviii (Oxford Univ. Press 1962) (1947). This surrender, however, is not in exchange for a society ruled by a sovereign, but rather is a submission to the "general will." JEAN-JACQUES ROUSSEAU, *THE SOCIAL CONTRACT* 55 (Christopher Betts trans., Oxford Univ. Press 1994) (1762). Rawls adapted social contract theory into a theory of justice. Unlike those before him, Rawls begins with a hypothetical situation in which individuals contract from behind a "veil of ignorance." The result is a set of principles of justice for the basic structure of society. JOHN RAWLS, *A THEORY OF JUSTICE* 136 (1971).

I. HISTORY OF THE SOCIAL CONTRACT

To reveal that a social contract exists, this Article briefly outlines the changing nature of the bank/government relationship throughout various phases of U.S. history. This Part considers banking history in three phases: (1) the colonial and Civil War era “nation-building” phase, (2) the Great Depression and the “New Deal in Banking” phase, and (3) the “deregulatory phase” from the 1970s through the early 2000s. To be sure, banking changed significantly within each phase, but the general contours of the social contract remained roughly the same.

A. *The Colonial to Civil War Social Contract*

Banking started in America to aid the colonies in building an economy from scratch. The new world, unlike the more established old world, did not have a financial system or large pools of money to borrow or lend. The first bank created in the new world, the Bank of Pennsylvania, was a public bank created to aid the cash-strapped colonies in feeding the troops during the Revolutionary War.¹⁴ The first national bank, the Bank of North America, was approved by Congress in 1781 and was formed by private and foreign funds.¹⁵ Alexander Hamilton, a then twenty-four-year-old soldier and vocal advocate of establishing a national bank, wrote, “Tis by introducing order into our finances—by restoring public credit—not by gaining battles, that we are finally to gain our object.”¹⁶ His time in the army had convinced him that “military operations could not be made more effective without more money, and more money could not be procured without new means.”¹⁷ The Bank of Pennsylvania was a public enterprise,¹⁸ but did not become the “national bank” it was intended to be and was slowly “absorbed [into] private business.”¹⁹ Nevertheless, Hamilton argued that banks, “within reasonable limits, ought to consider it as a principle object to promote beneficial public purposes.”²⁰ When Alexander Hamilton responded to President Washington’s inquiry about the advisability of a national bank, he wrote that “such a Bank is not a mere matter of private property, but a political machine of the greatest importance to the State.”²¹

14 Robert Morris said the bank was “‘in fact nothing more than a patriotic subscription of continental money . . . for the purpose of purchasing provisions for a starving army.’” BRAY HAMMOND, *BANKS AND POLITICS IN AMERICA* 45 (1957) (alteration in original) (quoting ALEXANDER HAMILTON, *THE WORKS OF ALEXANDER HAMILTON* 233 (H.C. Lodge ed., 1904)).

21 *Final Version of the Second Report on the Further Provision Necessary for Establishing Public Credit: Report on a National Bank (Dec. 13, 1790)*, in 7 *THE PAPERS OF ALEXANDER HAMILTON* 236, 329 (Harold C. Syrett ed., 1963).

The first few banks of the new world were started as public entities that would meet the credit demands of the public and the new government. By 1790, four banks were in business in four cities—Philadelphia, New York, Boston, and Baltimore²²—and “each bank was a public bank; that is, it was distinctly more than a private institution. Though its active management was private, it was bound as well as enfranchised by governmental authority, and the state was as often as not a shareholder.”²³ Bray Hammond, the leading expert on early U.S. banking describes the arrangement as such: “[T]he community, whether shrewdly or not, had adapted private initiative and wealth to public purposes, granting privileges and exacting duties in return. . . . [T]here persisted a strong conviction that a charter was a *covenant*”²⁴ Thus, the founders and early colonial governments viewed banks as a “unique institution” that was a “public” good.²⁵

Public opinion toward banking was mixed, but there was widespread suspicion of bank power and a distaste for banking that caused many to oppose the creation of banks. Alexander Hamilton was an early advocate of the banks and Thomas Jefferson, an early opponent.²⁶ But they advocated and opposed banks, respectively, based on a similar understanding of the potential for banks to shape the economy and change society. Hamilton recognized that banks would be pivotal in turning an agrarian and rural economy into an interconnected economy with central planning and development. It was this same transformation and the banks’ central role in it that Jefferson opposed.²⁷ Jefferson was not alone in his disdain for banks. Most of the public viewed banks as corrupt, lacking the commitment to agrarian thrift and hard work that were representative of the early colonies.²⁸ In 1811, former President John Adams wrote: “Our whole banking system I ever abhorred, I continue to abhor, and shall die abhorring.”²⁹ Similarly, in 1833, William Gouge described banking as “the *principal* cause of social evil in the United States.”³⁰ He viewed banks’ vast monetary power and capabilities as a privilege given to corporations and denied to individuals.³¹ This disdain for banks dictated that the banks of the new world be kept under the supervision of the state.

Such sentiments were rooted in the traditional agrarian beliefs that feared concentrated monetary power. Thus, there was widespread fear of banking monopolies or conglomerates that would amass political power and

influence and wield it to thwart the budding democracy.³² Banks were described as

artificial creature[s] endowed with powers not possessed by human beings and incompatible with the principles of a democratic social order. . . . “Th[e] institution, having no principle but that of avarice, which dries and shrivels up all the manly, all the generous feelings of the human soul, will never be varied in its object and if continued will accomplish its end, viz., to engross all the wealth, power and influence of the state.”³³

Early supporters of banks, such as Thomas Paine, believed that banks would strengthen the nation by facilitating commerce.³⁴ The public would benefit and the economy would prosper, Paine argued, by the increased efficiency in trade facilitated by banking.³⁵ Many people in burgeoning regions, incited by the colonial mercantilist spirit of capitalism, hailed banks for playing a central role in the “wondrous growth” of American communities.³⁶ This formative tension between traditional agrarian morality and the new mercantilist spirit of *laissez-faire* shaped the evolution of the social contract. As banking developed in the early nation-building era, so did ideological conflict between banks as self-interested commercial enterprises and banks as public entities with compromises on both sides.³⁷ Banks would be allowed to expand, but they would have to honor a distinctively public mission.

1. The First and Second Bank of the United States

The debates over the First and Second Banks of the United States have filled volumes. This Article will not recapitulate complex national dialogue involved in the chartering of these two institutions. Instead, it will focus on a point of central importance here: these banks were viewed as public-serving institutions that would help the country in many ways, including by standardizing American currency. During the debates over the first and second national banks, policymakers on both sides recognized that centralized banking could be used to solve formidable national problems with regard to the

32 *Id.* at 40.

33 HAMMOND, *supra* note 14, at 54–55 (quoting William Findley).

34 *See id.* at 60.

35 *Id.* Thomas Paine wrote,

[T]he principal public use of [the bank] at this time is for the promotion and extension of commerce. The whole community derives benefit from the operation of the bank. It facilitates the commerce of the country. It quickens the means of purchasing and paying for country produce and hastens on the exportation of it. The emolument, therefore, being to the community, it is the office and duty of government to give protection to the bank.

Id. (internal quotation marks omitted).

36 *See generally id.* at 7–39, 629–30 (describing the conversion from hard-money idealistic agrarianism to unanimous support of cheap credit and easy money).

37 *See id.* at 64 (stating that “the conflict of principles and interests—economic, social, moral, and political—in that first lustrum was to recur often and far more momentously in the country’s later history”).

money supply.³⁸ Scholars have noted that these early banks “shared a common purpose: advancement of the commonwealth through [their] assistance to economic progress.”³⁹

a. Federal Instrumentality

The federal instrumentality doctrine⁴⁰ was first introduced in *McCulloch v. Maryland*, where Chief Justice Marshall declared unconstitutional a state

38 HOFFMANN, *supra* note 27, at 46 (“Congress established the second Bank of the United States to provide a uniform currency, intending thereby to bring economic chaos under control for the benefit of the government and the people.”). The second bank of the United States was built not only to handle the monetary affairs of the central government, but was also explicitly charged with improving the economy. The interests of the general public were integral to the bank’s design. *Id.* at 50.

39 HOWARD BODENHORN, A HISTORY OF BANKING IN ANTEBELLUM AMERICA 31 (2000).

40 The doctrine of national banks as federal instrumentalities is still in force but has lost the meaning it had when national banks were first created. The doctrine of federal instrumentality is a constitutional principle permitting Congress to immunize certain private entities, such as banks, from state taxation or control. It extends the doctrine of preemption—that federal law may constitutionally supersede state law—to protect not only federal agencies from state law but also private entities functioning as federal instrumentalities. The most important factor distinguishing an ordinary private entity from a tax-immune federal instrumentality is whether it performs “an important governmental function.” *Fed. Land Bank v. Bismarck Lumber Co.*, 314 U.S. 95, 102–03 (1941) (quoting *Fed. Land Bank v. Priddy*, 295 U.S. 229, 231 (1935)). The Supreme Court has consistently classified national banks as federal instrumentalities. The *McCulloch* and *Osborn* principles flourished even after the Bank of the United States expired and the National Banking Acts (NBA) of 1863 and of 1864 initiated a new system of privately owned national banks. National Banking Act of 1864, ch. 106, 13 Stat. 99; National Banking Act of 1863, ch. 58, 12 Stat. 665. See generally *Osborn v. Bank of the U.S.*, 22 U.S. (9 Wheat.) 738 (1824) (reaffirming that state taxes may not be levied on the national bank, which is a federal instrumentality); *McCulloch v. Maryland*, 17 U.S. (4 Wheat.) 316 (1819) (holding that Congress has the power to create a national bank that is exempt from state taxation due to its status as a federal instrumentality). The NBA codified the status of several banking institutions as federal instrumentalities. See, e.g., 12 U.S.C. § 484 (2006) (exempting national banks from state visitatorial powers); 12 U.S.C. § 531 (2006) (prohibiting the taxation of federal reserve banks); 12 U.S.C. § 1433 (2012) (exempting federal home loan banks from taxation generally); 12 U.S.C. § 1464 (2012) (limiting discriminatory local taxation on federal savings associations). Several turn-of-the-century cases further affirmed that banks under the NBA were, like their predecessors, immune from state control because they had important federal responsibilities. See, e.g., *Easton v. Iowa*, 188 U.S. 220, 229 (1903) (explaining national banks were “independent, so far as powers conferred are concerned, of state legislation”); *Davis v. Elmira Sav. Bank*, 161 U.S. 275, 288 (1896) (“[W]e should thus have to consider all the deposits as made with an implication that they were subject to federal law, and hence the conflict between the two laws would become evident, and the federal law, being paramount, would prevail.”); *Mercantile Bank v. New York*, 121 U.S. 138, 154 (1887) (explaining the banks were “exempted from the power of the States in this respect, because these banks were means and agencies established by Congress in execution of the powers of the government of the United States”); *Farmers’ & Mechs.’ Nat’l Bank v. Dearing*, 91 U.S. 29, 34–35 (1875) (holding that banks are in the category of private entities that can be taxed by states, but only with the express or implied consent of Congress). These decisions

rested on the government's practical need for national banks to fulfill public obligations to finance the national government, control monetary policy, strengthen national unity, and offer lending and savings services. *See, e.g., Farmers' & Mechs.' Nat'l Bank*, 91 U.S. at 33–34 (noting that “[t]he national banks organized under [the NBA] are instruments designed to be used to aid the government in the administration of an important branch of the public service. They are means appropriate to that end. . . . States can exercise no control over them, nor in any wise affect their operation, except in so far as Congress may see proper to permit”). In *Mercantile Bank v. New York*, for example, the Court upheld a portion of the NBA that prohibited any state from imposing discriminatory taxes on national banks. *Mercantile Bank*, 121 U.S. at 154–55. The Court explained that national banks are privy to special protection because “[t]he object of [the NBA] was to establish a system of national banking institutions, in order to provide a uniform and secure currency for the people, and to facilitate the operations of the Treasury of the United States.” *Id.* at 154. The practical role of banks changed, however, with the Federal Reserve Act of 1913 and the Glass-Steagall Act of 1933, which relieved national banks of many governmental responsibilities. *See Watters v. Wachovia Bank*, 550 U.S. 1, 27 (2007) (Stevens, J., dissenting) (describing how both acts ultimately relaxed federal limits on mortgage lending by national banks and shifted monetary and financial responsibilities to the Federal Reserve and FDIC). Banks chartered under the NBA no longer carried a social obligation to provide the government monetary services, and debate arose in the following decades about the extent to which banks should enjoy continued instrumentality status. *See, e.g., First Agric. Nat'l Bank v. State Tax Comm'n*, 392 U.S. 339, 362–63 (1968) (Marshall, J., dissenting) (noting that the doctrine can be read broadly or narrowly and that the majority had adopted a broad reading and that the narrow reading would prohibit only discriminatory state taxation of national banks, whereas the broad reading prohibits any state taxation of national banks unless Congress allows it). Nonetheless, the Court has maintained that national banks are federal instrumentalities and immune from state laws that undermine the NBA purposes. *See Watters*, 550 U.S. at 11. The Court repeatedly has held that national banks deserve immunity based on their “performance of [important] governmental functions.” *See First Agric. Nat'l Bank*, 392 U.S. at 353 (quoting *Standard Oil Co. v. Johnson*, 316 U.S. 481, 485 (1942)) (internal quotation marks omitted). The doctrine and theoretical test for ascertaining federal instrumentalities remained virtually unchanged, as the Court continued to affirm the *McCulloch* reasoning throughout the 1900s and as recently as 2007. *See, e.g., Watters*, 550 U.S. at 10–11, 21 (holding that subsidiaries of national banks qualify for immunity from state taxation based on *McCulloch* and its nineteenth-century progeny); *Beneficial Nat'l Bank v. Anderson*, 539 U.S. 1, 11 (2003) (noting that the principles of federal instrumentality enumerated in *McCulloch* and its progeny are still applicable to grant national banks certain tax immunity today); *see also Unemployment Comp. Comm'n v. Wachovia Bank & Trust Co.*, 2 S.E.2d 592, 596 (N.C. 1939) (noting that when considering whether to apply the doctrine of federal instrumentalities, courts consider whether an entity is “perform[ing an important] governmental function”). Throughout its development, however, the doctrine became more abstract. The Court noted in *United States v. New Mexico*: “As the federal structure—along with the workings of the tax immunity doctrine—has evolved, [the *McCulloch* directive] has taken on essentially symbolic importance as the visible ‘consequence of that [federal] supremacy which the constitution has declared.’” 455 U.S. 720, 735 (1982) (second alteration in original) (footnote omitted) (quoting *McCulloch*, 17 U.S. (4 Wheat.) at 436). That is, the federal instrumentality doctrine applies as much to national banks today as it did to the Second Bank of the United States in *McCulloch*. The Court continues to expressly recognize that national banks are federal instrumentalities, which shields them from a variety of state tax and regulatory directives, but the Court does not enumerate the important governmental functions performed by banks. Rather, banks are federal instrumentalities because they serve a vague

tax on the Second Bank of the United States⁴¹ because the bank was an “instrument employed by the government.”⁴² Because Congress established the bank with a purpose of fostering a unified national economy, federal instrumentality status was necessary to protect the special relationship between the bank and the nation from state intrusion.⁴³ The Court rejected the state’s contention that a bank was not a federal instrumentality because it had mostly private ownership and functioned as a commercial bank.⁴⁴ The bank and its branches were federal instrumentalities, exempt from state taxation despite private ownership, because they were chartered by the government to serve the public.⁴⁵ Landmark cases like *McCulloch* reveal that the earliest concept of federal instrumentality rested on the fact that Congress created a Bank of the United States to expressly and practically serve public economic needs.

2. Banking Regulation

Even early on, the proponents of banks had at least some sense that banks must be saved from themselves in some matters. Thus, Hamilton laid out basic limitations on bank liabilities.⁴⁶ “The early years of the republic are often spoken of as if the era were one of *laissez faire* in which governmental authority refrained from interference in business and benevolently left it a free field. Nothing of the sort was true of banking.”⁴⁷ As a result, these early state banks were inherently linked to their sponsoring government. This was

social responsibility of upholding a historical concept of federal supremacy. *Cf. Watters*, 550 U.S. at 11–14 (discussing how federal supremacy for national banks prevents state regulation of a bank’s prescribed powers). For further analysis of the modern doctrine, see Roderick M. Hills, Jr., *Exorcising McCulloch: The Conflict-Ridden History of American Banking Nationalism and Dodd-Frank Preemption* (N.Y.U. Sch. of Law Pub. Law & Legal Theory Research Paper Series, Working Paper No. 12-45, 2012).

41 *McCulloch*, 17 U.S. (4 Wheat.) at 436; *see The Supreme Court, 1967 Term*, 82 HARV. L. REV. 63, 284 (1968) (discussing the continued application of *McCulloch*).

42 *McCulloch*, 17 U.S. (4 Wheat.) at 436–37.

43 Chief Justice Marshall declared that federal instrumentalities needed protection from state taxation because “the power to tax involves the power to destroy.” *Id.* at 431. In another early case, *Osborn*, the Court reaffirmed *McCulloch* in holding that a state cannot tax the Bank of the United States. *Osborn*, 22 U.S. (9 Wheat.) at 867–68.

44 In fact, four-fifths of the bank’s starting capital was provided by private investors and government control of the bank was restricted. JOHN THOM HOLDSWORTH & DAVIS R. DEWEY, *THE FIRST AND SECOND BANKS OF THE UNITED STATES*, S. DOC. NO. 61-571, at 152–53 (2d Sess. 1910).

45 *See Osborn*, 22 U.S. (9 Wheat.) at 769 (“This public benefit may consist of the facilities afforded to the State, in the management of its fiscal concerns; or it may consist in the convenience to the community in the transaction of mercantile and other money affairs. It may arise from the payment of annual revenue, or a stipulated sum, into the public treasury. . . . The character of civil institutions does not grow out of their incorporation, but out of the manner in which they are formed, and the objects for which they are created.” (quoting *Dartmouth Coll. v. Woodward*, 17 U.S. (4 Wheat.) 518, 638 (1819))).

47 *Id.* at 185.

also because they were modeled after the public banks of the old world, such as the Bank of England, whose primary purpose was to serve the state.⁴⁸

During the nineteenth century, banks were primarily chartered by states as opposed to the federal government.⁴⁹ And state governments, in keeping with past practice, relied on banks to perform necessary economic functions.⁵⁰ One historian asserts: “In practice state legislatures viewed banking corporations as instrumentalities of the state, established to serve various public purposes as well as the private interests of stockholders and borrowers.”⁵¹ Indeed, this conception of banking as a state instrumentality continued into the early twentieth century. In *Schaake v. Dolley*, a 1911 case where Kansas denied a banking charter because the local economy could not support another bank, the Kansas Supreme Court explained that banking is not “a matter of private concern only, like the business of the merchant, and for all purposes of legislative regulation and control it may be said to be ‘affected with a public interest.’”⁵² The court emphasized that, because of the position of banks as recipients of the “public patronage,” they become “a trustee of the fiscal affairs of the people and of the state.”⁵³ The court made clear that banking needed to be distinguished from “ordinary private business” because of its “public nature,” which made banking “properly subject to the police power of the state.”⁵⁴

In particular, early state laws attempted to keep banks small and short lived, in keeping with widely held fears of concentrated economic power.⁵⁵ New York banking laws, for example, set maximum capital standards, and most bank charters came with expiration dates. Legislatures renewed the charters subject to conditions or most commonly denied requests for charter extensions.⁵⁶ In addition, state law imposed participation requirements to prevent privately controlled banks from being dominated by a few individuals

48 *Id.* at 68. “[B]anking regulations in the United States were, by both nineteenth- and twentieth-century standards, quite restrictive, resulting in a banking system characterized by a large number of small banks.” GROSSMAN, *supra* note 22, at 222.

49 HOFFMANN, *supra* note 27, at 71.

50 States chartered banks to perform a variety of public purposes, such as “to provide credit for trade, manufacturing, and agriculture; to provide circulating medium for every day economic transactions; to act as the fiscal agent of the state; to generate revenue for state government operations, obviating the need for taxation; to finance public improvements; and to regulate other banks in the state.” *Id.* at 72.

51 *Id.* at 87. “In authorizing them, legislators knew they were providing economic and social infrastructure; they did so with explicit attention to having enough for everyone; and their purposes included deliberate geographic and functional allocation.” *Id.* at 90.

55 GROSSMAN, *supra* note 22, at 222.

56 HOFFMANN, *supra* note 27, at 78. “Prospective bankers had to lobby the legislature in order to be granted a charter; they might be successful if they were, in the view of the legislature, of good character and if the legislature felt that the area needed another bank.” GROSSMAN, *supra* note 22, at 138.

or economic interests.⁵⁷ In short, states allowed banks to profit, but they also acted to limit banks' power and size in the interest of serving the public good.⁵⁸

3. The Civil War

A major change in banking was precipitated by the Civil War: the great stresses caused by the conflict spurred the re-entry of the federal government into bank chartering and regulation.⁵⁹ A lack of government credit and funding in the face of war compelled President Lincoln and Treasury Secretary Salmon Chase to loosen the Jacksonian treasury requirements, which forbade the national government from regulating the monetary system using bank notes or adopting modern credit practices.⁶⁰ The war created such a financial burden on the government that it had to borrow money from state banks.⁶¹ The federal government turned to the banks of New York, Boston, and Philadelphia to finance the war and borrow money. Indeed, the U.S. treasury depended entirely on private state bankers for money.⁶² This dependence led the federal government to push for a transition from specie to paper currency, which would require more trust in the banking system and a stronger tie between banks and the federal government. In recognizing its need to expand federal power, the North made unprecedented assertions of federal power through the Legal Tender and National Currency Acts of 1862 and 1863. The federal government's transition to paper money represented

57 HOFFMANN, *supra* note 27, at 78.

58 Although there is certainly support for the proposition that banking and the state were intertwined in early American history, there is also some evidence that in some states banking was less regulated than today and these banks were purely driven by profit. The United States had a brief period of free banking from 1836 to 1863 where there was no national bank and states allowed relatively easy entry into banking. Free banking, which was originally implemented in New York and replicated elsewhere, was "an application of *laissez faire* to the monetary function. . . . It broke with the Hamiltonian concept of banking and the principle that supervision of banking as a monetary function was a responsibility of the federal government." HAMMOND, *supra* note 14, at 573. Many banks were formed during this time and some came to be called "wildcat banks" because many were located in rural locations and operated outside the purview of the law. RICHARD SCOTT CARNELL ET AL., *THE LAW OF BANKING AND FINANCIAL INSTITUTIONS* 7–8 (Vicki Been et al. eds., 4th ed. 2009); GROSSMAN, *supra* note 22, at 139. Most scholars view this short-lived era as a failure although that assessment is not uncontested. CARNELL ET AL., *supra*; see HAMMOND, *supra* note 14, at 599 ("The results of this Jacksonian [*laissez faire*] revolution were obvious in monetary inflation, in speculation, in wasted labor, in business failures, in abandonment of an efficient means of credit control, and in corruption of a sound monetary system.").

59 See BRAY HAMMOND, *SOVEREIGNTY AND AN EMPTY PURSE* 359 (1970) ("The South's rebellion was an extreme version . . . of what Maryland . . . tried to do . . . about the federal Bank of the United States . . .").

60 The Independent Treasury Act of 1846 forbade the national government from regulating the monetary system, using bank notes, or adopting modern credit practices. *Id.* at 20–21.

how banks and the government needed to work together to promote national economic growth, stability, and well-being.⁶³

The currency debates highlight the philosophical underpinnings of the banks' developing relationship with the government, as "the idea for a national banking system and for a national currency became synonymous to people."⁶⁴ Banking policy was, in many respects, as politically controversial and deeply rooted as the issue of slavery because it came to represent the tension between state and federal power. Arguments against a national currency and a national banking system paralleled those used in defense of secession. Many challenged the constitutionality of Treasury Secretary Chase's proposal for national banks, which would be "subordinate to congressional authority and wholly independent of the state legislatures."⁶⁵ Yet "the new spirit of nationalism being fostered by the war" led others to believe that public welfare required a national banking system.⁶⁶ Newspapers like *The New York Times* supported a nationalized legal tender because it was an assertion of the nation's constitutional sovereign power that affirmed the principles the union stood for.⁶⁷ Critics believed that national banking and currency would make wealthy men wealthier and would press states into federal servitude.⁶⁸

The establishment of national banking and a national currency was the birth of the partnership between the federal government and banks to enact monetary policy. National banks were created for this purpose and were treated as "federal instrumentalities," or tools of the federal government to accomplish its aims. The process of replacing state bank notes with a national paper money system would force banks to assume responsibility for the nation's economic survival by making banks carry out the government's monetary policy.⁶⁹ A well-regulated national banking system would be "relied upon to carry the nation through its financial difficulties."⁷⁰

63 *Id.* at 97 ("[T]he perfection of economy in time, labor and expense would seem to have been attained in a [paper] currency worthy of and honorable to Christian civilization" (quoting Editorial, N.Y. TRIBUNE, Jan. 25, 1862) (internal quotation marks omitted)).

In sum, banks and banking in the United States were initiated to support the early colonies, then the states, and then the nation and the union. Banks were chartered and regulated to fulfill state or national policies aimed at benefitting the public as a whole in ways that reached far beyond merely ensuring a thriving and profitable banking industry. Although there was little in the way of an explicit social contract during the early colonial and post-Civil War era, from the beginning, public issues were fought on the turf of banking policy. Although there was no government safety net during this time, the granting of a bank charter and the use of banks for monetary policy were ways in which the banks and the government relied on each other. This idea of conceptual unity carried with it, in its nature, a recognition that banks were subject to governmental control. And in fact many controls were imposed, especially restrictions on bank size. There was, however, a deep problem with this form of the banking social contract: it left banks open to failures that resulted from financial mismanagement and bank runs.⁷¹ This problem manifested itself with catastrophic consequences during the Great Depression.

B. *The Great Depression and the New Deal*

The Great Depression and the New Deal that followed marked a pivotal moment in American regulatory history. And no sector was affected more than banking. If public opinion toward banks was skeptical before the 1930s, it turned outright hostile during the 1930s as the American people faced unprecedented suffering due to bank failures across the nation. In *Other People's Money* Louis Brandeis made the case against the newly developed "Money Trusts," or investment banks and bankers, whose goals he saw as to exact inordinate securities underwriting fees and enrich themselves through the use of the deposits of the middle class.⁷² This view mirrored that of Thomas Jefferson nearly a century earlier.⁷³ The problem with this oligarchy, Brandeis argued, was that it would lead to injuries inflicted on the very people whose deposits were used to secure such dominant positions.⁷⁴ Another, no less serious, evil was the Money Trust's success in suppressing competition and innovation.⁷⁵

Brandeis criticized the disproportionate influence investment bankers wielded from their control of other people's money.⁷⁶ "If the bankers' power were commensurate only with their wealth, they would have relatively

little influence on American business.”⁷⁷ Instead, the large investment banks of the time controlled, either directly or indirectly, a staggering twenty-two billion dollars, more than three times the value of all property, real and personal, in all of New England.⁷⁸ With large investments in American business, including railroads, industrial corporations, and life insurance companies, banks and their investment bankers requested directorships on company boards. J.P. Morgan himself held seventy-two directorships in forty-seven of the largest corporations in the country.⁷⁹ The other two banks stood not far behind. Here was Jefferson’s worst fear coming to pass.

In addition to recommending conflict-of-interest legislation that would deter banker directorships, Brandeis suggested a more fundamental solution—turning banks into public-service corporations.⁸⁰ Comparing them to the country’s railways, then an essential utility of commerce, he argued that banks should be treated not as private business, but as a public service. “The dependence of commerce and industry upon bank deposits, as the common reservoir of quick capital is so complete, that deposit banking should be recognized as one of the businesses ‘affected with a public interest.’”⁸¹ Brandeis quoted Senator Owen, Chairman of the Committee on Banking and Currency, to add historical support for this suggested transformation:

My own judgment is that a bank is a public-utility institution and cannot be treated as a private affair, for the simple reason that the public is invited, under the safeguards of the government, to deposit its money with the bank, and the public has a right to have its interests safeguarded through organized authorities. The logic is beyond escape. All banks in the United States, public and private, should be treated as public-utility institutions, where they receive deposits.⁸²

1. The New Deal Social Contract

Drawing in part on Brandeis’s concept, President Roosevelt seized on the calamity of the Great Depression to initiate a new form of social contract with banks. The government decided that it needed a stable banking system that was not prone to conglomeration and excessive power. Therefore, it put in place activity restrictions, enforced antitrust rules, and provided a government safety net in exchange for federal support. This safety net would minimize banks’ vulnerability to runs, a contagion that had quickly spread across the banking sector. Banks vigorously opposed Roosevelt’s imposition of

77 *Id.* at 12–13.

78 *Id.* at 22–23. The key to this control lied in combinations. J.P. Morgan & Co., along with two New York banks, National City and First National, constituted the Money Trust. *Id.* at 24.

activity restrictions as well as deposit insurance, but President Roosevelt used the public's anger at the banks to catalyze public and legislative support for these measures.⁸³

The most important and most comprehensive demands on banks had to do with making banks less risky by keeping them from engaging in nonbanking, or commercial activities. The Glass-Steagall Act limited banking activity to traditional bank functions and prohibited banks from engaging in riskier activities, such as underwriting and proprietary trading.⁸⁴ These controls were aimed at keeping banks small and constraining their market footprint.⁸⁵ The second part of this implicit deal made with banks after the Great Depression focused on using banks to promote public objectives, specifically by increasing access to credit.⁸⁶ Roosevelt recognized that banks had public-serving functions and aggressively enlisted them to meet public needs.

The government chartered specific banking institutions that would play a major part in aiding the poor and middle class in buying homes and providing access to low-cost credit. Congress established the Federal Home Loan Bank System in 1932 to promote homeownership in the United States.⁸⁷ In addition, Congress created the Federal Credit Union Act to charter and regulate federal credit unions with the primary mission of lending to consumers, not businesses.⁸⁸ The National Housing Act was also created to provide federal funds to support Savings and Loan Associations specifically charged with financing home purchases.⁸⁹ In addition, Fannie Mae was chartered as a government organization to aid in the underwriting of home mortgages to enable home ownership by more of the public.⁹⁰

Although some banks aimed to serve the poor before the Great Depression, the New Deal solidified their place in the national economy and gave them a formal charge that would be backed by governmental support. Unfortunately, these banks also ceased to fulfill their obligations to the poor during the 1980s during the deregulation that homogenized banking.⁹¹ These banks could not maintain profitability in the face of the market changes during the 1980s. And because the social contract forged during the

New Deal had eroded by that time, the government did not step in to subsidize these failing banks.⁹²

The social contract forged during the Great Depression stabilized U.S. banking for several decades. The banking sector grew steadily from 1933 until the mid-1970s without experiencing any financial panic or collapse.⁹³ Banks operated conservatively and regulators, unchallenged, enforced the Glass-Steagall Act and other New Deal regulatory mandates.⁹⁴ During this time, banking regulation was motivated by the goal of soundness and stability and the policy goal of directing credit toward public-serving goals that were deemed worthwhile. These aims were achieved through anticompetitive regulations and activity restrictions, which protected banking stability and profitability, but which also stifled financial innovation. During this era, banks were stable and profitable. Therefore, neither the government nor the banking industry agitated for a change of policy.

In sum, the Great Depression and the New Deal that followed led to the first wave of comprehensive activity restrictions imposed on banks. This New Deal era social contract with banks focused on safety and soundness, which was meant to protect depositors as well as the United States economy from catastrophic bank failure.⁹⁵ For the first time, the federal government provided federally funded deposit insurance to prevent confidence-destroying runs from wreaking havoc on banks.⁹⁶ In return, the federal government imposed a framework of banking controls intended to minimize the moral hazard effects of deposit insurance and to protect the insurance fund from losses.⁹⁷ Moral hazard is defined as a “lack of incentive to guard against risk

when one is protected from its consequences.”⁹⁸ These controls on banks resulted in reduced bank size and influence as well as a marked reduction in bank failures for over fifty years.⁹⁹

The New Deal social contract kept the banking system safe and functional as the country developed a modern economy. The state needed banks to be reliable and banking regulation in that era achieved that purpose. The banking sector experienced measured growth and success while the rest of the economy generally thrived. Such an arrangement cannot be replicated today, despite some calls to do so, because the financial sector has grown much larger and more complex.¹⁰⁰ What can be emulated is the articulated quid pro quo established between banks and the government that assured that banks would do what the government needed them to do, and the government’s return promise to provide a safety net and restore public trust in banking.

2. Civil Rights and the Social Contract for Equality

The social contract initiated during the Great Depression was amended during the Civil Rights era to make the nation’s banks responsive to the government’s goals of racial equality. What the Civil Rights era reforms added to this public-protecting conception of the government/banking relationship was that the social contract had to work to protect *all* members of the public, not just some. This amendment reinforced the relationship between the government and the banks initiated during the New Deal by simply expanding the public benefits that that relationship produced. In keeping with the goal of ensuring benefits to *the public*—as opposed to only some favored members of it—a new set of laws emerged, which increased access to credit by eliminating discrimination in lending and banking services.

There were over twenty civil rights reforms between 1968 and 1988 that declared and implemented citizens’ “right” to bank without discrimination.¹⁰¹ The largest and most important were the Fair Housing Act of 1968

in the United States was to protect depositors from the bank runs experienced during the Great Depression).

No. 100-533, 102 Stat. 2689 (codified as amended at 15 U.S.C. § 631 (2006)) (affording women who own businesses protection against discrimination based on gender, such as requiring a legitimate justification for denying credit); Community Reinvestment Act of 1977, Pub. L. No. 95-128, 91 Stat. 1147 (codified as amended at 12 U.S.C. §§ 2901–2909 (2012)) (stating that regulated banking institutions must show that they are meeting the credit need within the communities they do business, including low to moderate income community members); Federal Trade Commission Improvement Act, Pub. L. No. 93-367, 88 Stat. 2183 (1975) (codified as amended at 15 U.S.C. § 2301 (2006)) (giving the Federal Reserve the power to identify unfair practices, including discrimination, and construct regulations to prohibit

(FHA), Equal Credit Opportunity Act of 1974 (ECOA), the Home Mortgage Disclosure Act of 1975 (HMDA), and the Community Reinvestment Act of 1977 (CRA).¹⁰² The civil rights reforms oblige banks to foster economic equality and to refrain from discrimination against customers or neighborhoods. These reforms focused on removing barriers to credit for people of color as well as low-income communities. This imposition of normative values on banks was premised on the importance of banking services to all members of all communities.

These reforms reflected both an extension of the civil rights legislation of the era as well as a response to market conditions. As the banking sector suffered competition from the capital markets in the 1970s and 1980s, banks increasingly shed lower income and minority customers and closed branches in low income neighborhoods in order to cut costs, a process called “redlining.”¹⁰³ The effect was a cyclical decline due to lack of credit in these communities. Businesses left, people lost jobs, banks continued to close, and crime increased, accelerating the downward spiral.¹⁰⁴ Many of these communities have yet to recover from the exodus of businesses caused by bank departures that occurred during that era. The new laws were in part framed to induce banks to avoid business decisions that imposed negative externalities on already-disadvantaged people and communities, and thereby frustrated the government’s efforts to address historic discrimination.

In addition to market forces, there was also evidence of discrimination in lending.¹⁰⁵ If access to credit enables people to escape poverty, these anti-discrimination policies were meant to ensure that a portion of the population was not stunted economically from upward mobility.¹⁰⁶ The CRA, coupled with several other Civil Rights era legislative acts, was the first time the government explicitly mandated that banks take action in these communities and combat discrimination. When introducing the Senate bill that would

and enforce against these unfair acts); Home Mortgage Disclosure Act of 1975, Pub. L. No. 94-200, 89 Stat. 112 (codified as amended at 12 U.S.C. §§ 2801–2810 (2012)) (requiring that depository institutions report the race, ethnicity, sex, and income of borrowers and applicants and the prices on these loans to ensure that discriminatory practices are not being pursued); Fair Housing Act, Pub. L. No. 90-284, 82 Stat. 81 (1968) (codified as amended at 42 U.S.C. §§ 3601–3619 (2006)) (making it unlawful to discriminate on the basis of “race, color, religion, or national origin” when extending housing credit); *see also* David A. largely become the CRA, Senator Proxmire, Chairman of the Senate Committee on Banking, Housing, and Urban Affairs commented that the bill was based on a few “widely shared assumptions,” including the assumption that “a public charter conveys numerous economic benefits and in return it is legitimate for public policy and regulatory practice to require some public purpose.”¹⁰⁷ Later, the Chairman “compared a bank charter to a franchise to serve local convenience and needs and suggested that it is fair for the public to ask something in return.”¹⁰⁸

The mandate that banking should be free of discrimination persists today. The Department of Justice has recently brought charges and eventually settled several cases against banks under the FHA and the ECOA for discrimination against minority borrowers. The Justice Department used the controversial theory of “disparate impact,” which can establish wrongdoing even without evidence of intentional discrimination as long as it can be shown that minorities were statistically given inferior mortgages than whites with similar economic backgrounds.¹⁰⁹ The Consumer Financial Protection Bureau has also embraced the theory, stating, “We cannot afford to tolerate practices, intentional or not, that unlawfully price out or cut off segments of the population from the credit markets.”¹¹⁰ The use of disparate impact analysis in the lending context sent shockwaves through the banking

110 CFPB Embraces ‘Disparate Impact’ Theory of Discriminatory Lending, AM. BANKER (Apr. 18, 2012), <http://www.americanbanker.com/video/cfpb-disparate-impact-discriminatory-lending1048536-1.html>.

world.¹¹¹ This was not the first time the Justice Department has used disparate impact to enforce the ECOA, however. In 1994, the DOJ entered a consent decree with a Washington D.C. bank for ignoring African American communities in the D.C. area.¹¹² Regulators defend the use of disparate impact as a useful tool to prevent inequality in lending.¹¹³

Banking regulators see it as part of their mission to keep banking free from discrimination. For example, the Federal Deposit Insurance Corporation (FDIC) states that it is “committed to expanding economic inclusion in the financial mainstream by ensuring that all Americans have access to safe, secure, and affordable banking services.”¹¹⁴ The FDIC makes clear that this guarantee applies only to banks and does not extend to other corporations or nonbanking services.¹¹⁵

Equal access to credit has been an articulated and enforced tenet of the banking regulatory framework for more than forty years. Enforcing non-discrimination in banking looks more like enforcing non-discrimination in public utilities or common carriers than in other areas of commerce which the government leaves largely to market norms with a floor of constitutional protection against discrimination. The prevalence of these laws in banking does not necessarily mean that banks should be viewed as public utilities. However, they do show that the government views access to credit and banking services as an important right that should be provided to all citizens without unnecessary barriers. This has implications in forming the new social contract as outlined below.

C. Deregulation

Beginning in the late 1970s and 1980s, the banking sector started facing an identity crisis. After years of operating a safe and boring model dictated by the regulations imposed during the New Deal, the model seemed to be falling apart. Due to technological advances and financial innovation, capital markets and commercial paper markets started to offer safe and enticing alternatives to bank customers and banks quickly started to lose market share and profitability.¹¹⁶ There was something of a perfect storm that came together in the 1980s. In the same period, (1) some forms of deregulation (e.g., of airlines) generated popularity and success; (2) some forms of bank deregulation (e.g., decreased controls on interstate banking) generated new competition that advantaged (at least in the short term) the general public; (3) the economy was humming, thus increasing public confidence in free-market forces; (4) new competitive pressures were being placed on banks (particularly through the availability of money market accounts, competition from foreign banks, and the increased accessibility and liquidity of the capital markets);¹¹⁷ and (5) the growth of political power of large business institutions, including bank holding companies, created new opportunities for the exertion of pressure on lawmakers to go along with anti-regulatory demands.

The New Deal social contract proved to be outdated for the demands, speed, size, and complexity of modern finance. Slowly, banks and policymakers chipped away at the walls erected during the New Deal in the name of safety. This led first to regulators becoming more concerned with bank profitability than bank safety—a byproduct of the size and complexity of new financial institutions, and second, the changes led to an erosion of parts of the New Deal social contract.

BANKING L. 115, 117 (1985) (“[T]here is not a single service or product line today that is offered exclusively by commercial banks.”); Daniel R. Fischel et al., *The Regulation of Banks and Bank Holding Companies*, 73 VA. L. REV. 301, 304 (1987) (“[B]anks now face formidable competition in virtually every product or service they offer.”); Alan Greenspan, Chairman, Fed. Reserve Bd., Statement Before the Subcommittee on Financial Institutions and Consumer Credit of the Committee on Banking and Financial Services, U.S. House of Representatives (Feb. 13, 1997), in 83 Fed. Res. Bull. 249, 249 (1997) (“[T]echnology already has resulted in a blurring of product and service-defining lines so dramatic as to make many financial products virtually indistinguishable from each other and the old rules inapplicable.”); Congressman James A. Leach, *Keynote Address at the Fordham Journal of Corporate and Financial Law Symposium: The Future of Law and Financial Services*, 6 FORDHAM J. CORP. & FIN. L. 9, 11 (2001) (“Customers came to prefer and use new and more sophisticated products that, particularly in the banking industry, made many traditional banks irrelevant Banking was truly on a trend that might be described as ‘in eclipse,’ but even this is an understatement.”).

117 GROSSMAN, *supra* note 22, at 260–62 (explaining the process of disintermediation that occurred during this time due to the interest rate caps on bank accounts and inflation and high interest from other sources).

1. Safety and Soundness v. Profitability

During this era of both growth and transformation in finance, banks needed to adapt in order to survive and remain profitable. Their safe lending and borrowing business could not keep them afloat anymore without more freedom to take risks and expand. Concerns about banks' waning profitability led to growing pressure to deregulate banks and allow them to compete more freely with other institutions.¹¹⁸ The prevailing feeling was that banks could not effectively compete against these new products because regulations were holding them back.¹¹⁹ In response, Congress passed seven acts over the span of two decades which together effectively deregulated the banking industry.¹²⁰ Among other things, these acts deregulated deposit interest rates, dismantled geographic restraints on bank expansion, repealed Glass-Steagall barriers between banking and securities activities, and allowed the formation of large financial institutions.¹²¹ The slow demise of the Glass-Steagall Act brought with it more powerful and profitable banks.¹²² But that was the point. Regulators were admittedly trying to do anything in their power to make banks profitable again, even if it meant allowing concentra-

118 Fischel et al., *supra* note 116, at 304 (“[I]ncreased competition has substantially eroded, if not obliterated altogether, the effectiveness of much banking regulation.”); Helen A. Garten, *Regulatory Growing Pains: A Perspective on Bank Regulation in a Deregulatory Age*, 57 *FORDHAM L. REV.* 501, 505–06 (1989) (“The need to find new profit sources has been the most significant force behind deregulation of the banking industry.”). The push for banking deregulation came from many directions, including the federal government, regulators, the banking industry, consumers, and scholars. KERRY COOPER & DONALD R. FRASER, *BANKING DEREGULATION AND THE NEW COMPETITION IN FINANCIAL SERVICES* 17–19 (1984); Garten, *supra*, at 502.

119 See, e.g., FDIC, *MANDATE FOR CHANGE*, *supra* note 116, at 13 (“If banking companies are to maintain the earnings potential fundamental to their continued viability, they must have the opportunity to offer the products and services necessary to compete on even terms with their new competitors.”); Garten, *supra* note 118, at 507, 525 (noting that “many of the traditional tenets of bank regulation . . . have hindered banks in competing” and remarking that “[b]y imposing restrictions on the products and services that banks could offer . . . traditional regulation kept banks from competing with these new entrants”); Alan Greenspan, Chairman, Fed. Reserve Bd., Statement Before the Committee on Banking, Housing, and Urban Affairs, U.S. Senate (Dec. 1, 1987), in 74 *Fed. Res. Bull.* 91, 94 (1988) (noting that the competitiveness of banks has been reduced).

122 See *id.* at 27.

tions of power or conglomeration.¹²³ As long as the venture was profitable, it was viewed as a positive as far as the regulators were concerned.¹²⁴

This deregulation reflected an underlying shift in thinking about banks. Safety and soundness concerns were relegated behind profitability.¹²⁵ This shift occurred partly because the regulatory tools of the past (interest rate caps and activity restrictions) aimed at ensuring bank safety were no longer warranted. Due to disintermediation,¹²⁶ banks were rapidly losing market share and these restrictions exacerbated them. The regulators had to adjust their strategy to help banks remain safe and profitable. However, during this adjustment, the regulatory philosophy also changed such that along with lifting onerous and outdated restrictions, regulators also abandoned previous banking policy goals, such as avoiding concentrations of power.¹²⁷ In addition, the shifting focus to bank profitability allowed risky behavior that was profitable in the short term, but systemically destabilizing in the long term.¹²⁸ Perhaps most importantly, regulators fought the idea that banks were “special” in the way that they had been in the past.¹²⁹

REV. 1041, 1090 (2009); Interpretive Letter No. 1101 from Office of the Comptroller of the Currency, Authority of a National Bank to Engage in Financial Intermediation Transaction (July 7, 2008), *available at* <http://www.occ.gov/static/interpretations-and-precedents/jul08/intl1101.pdf>.

125 *See* Diamond & Dybvig, *supra* note 97, at 402 (stating that “deregulation will leave banking more competitive”); Garten, *supra* note 118, at 541 (analogizing the shift of banking regulatory strategy to the different perspectives of corporate debt holders and equity holders—the debt holder/old banking regulation is more concerned with safety and soundness while the equity holder/new regulation is more concerned with profitability); Anthony Saunders, *Bank Holding Companies: Structure, Performance, and Reform*, in *RESTRUCTURING BANKING AND FINANCIAL SERVICES IN AMERICA* 156, 172 (William S. Haraf & Rose Marie Kushmeider eds., 1988) (explaining the benefits to profitability in model of activity diversification). For a comprehensive analysis of how the OCC supplanted safety and soundness concerns for profitability in allowing risky derivative transactions, see generally Omarova, *supra* note 124.

126 Disintermediation describes the elimination of financial intermediaries, such as banks, resulting from high inflation rates and stagnant interest offered by banks (due to regulatory caps). Depositors can get better returns by investing in mutual funds or securities and thus banks lose customers and revenue. *See* GROSSMAN, *supra* note 22, at 260–62.

127 *See* FDIC, MANDATE FOR CHANGE, *supra* note 116, at 37–42. Undoubtedly, increased geographic expansion and relaxed limits on bank mergers would cause conglomeration. Yet these moves were encouraged by regulators in order to allow banks to compete. *See* Wilmarth, *supra* note 120, at 241.

128 Wilmarth, *supra* note 120, at 240–42.

129 For the original debate on the “specialness” of banking, compare E. Gerald Corrigan, *Are Banks Special?*, 1982 FED. RES. BANK MINNEAPOLIS ANN. REP., *available at* <http://www.minneapolisfed.org/pubs/ar/ar1982a.cfm> (answering in the affirmative), with Richard C. Aspinwall, *On the “Specialness” of Banking*, 7 ISSUES IN BANK. REG. 16 (1983) (arguing that banks are not special). Though remnants of the debate still remain, the view that banks are not special largely won out. Eric J. Gouvin, *Of Hungry Wolves and Horizontal*

To be clear, deregulation was not viewed as supplanting or abrogating safety and soundness concerns. Quite the opposite, regulators felt that in order to protect bank safety, they needed to assure their profitability.¹³⁰ In fact, profitability became of such paramount concern that many today view safety and soundness as synonymous with profitability.¹³¹ Profitability is necessary to a safe banking system, but it is not sufficient. For example, profitability was not the measure of safety and soundness in the previous half century. Rather, safety was defined by reference to vulnerability or exposure to excessive risk.¹³² During deregulation, bank profitability became a proxy for safety and soundness.¹³³ Therefore, bank regulators shed regulations that threatened profitability.¹³⁴ The Office of the Comptroller (OCC) for example, through interpretive letters, allowed banks to engage in highly risky derivatives transactions without examining the risks involved by instead emphasizing the potential profits of the venture.¹³⁵ However, these “profitable” transactions were laden with risks and have since exposed many banking institutions to heightened vulnerability.¹³⁶ The sheer size of the derivatives market is also staggering as the industry now dwarfs the size of the nation’s capital markets and GDP.¹³⁷ Regulators saved banking by allowing banks to become profitable and compete with nonbanks, but the focus on profitability did not shift once it became apparent that profitability is not always synonymous with safety.

For example, during the savings and loan crisis of the 1980s and 1990s, regulators continued to deregulate the industry with the hope that if troubled savings and loan associations (S&Ls) could engage in more expansive and riskier activities, they could regain profitability and recover their losses.¹³⁸ The strategy, termed “gambling for resurrection,”¹³⁹ was indicative of the regulatory philosophy of the time. Many blamed the industry’s lack of

138 See GROSSMAN, *supra* note 22, at 269 (noting the history and developments leading up to the S&L crisis, and the response “by both state and federal governments . . . [of]

profitability on onerous regulation and advocated deregulation so that S&Ls could compete with other market entities on an even playing field.¹⁴⁰ It was thought that regulations were impeding profitability and that their safety could only be achieved through competition.¹⁴¹ This did not come to pass. Instead, deregulation caused many of the most unscrupulous characters in the financial world to flock to S&L ownership and use them as private piggy banks insured by the government.¹⁴² The eventual colossal failure of the industry cost the government upwards of \$132 billion of taxpayer funds alone.¹⁴³

2. Erosion of the Social Contract

In addition to conflating profitability with safety and soundness, concerns about consumer protection and access to credit were also compromised during this era. For example, the OCC and the Office of Thrift Supervision (OTS) announced comprehensive preemption to protect all national banks and thrifts from state consumer protection laws. The rationale was that these public-protecting laws rendered banks less efficient and profitable by limiting the kinds and amounts of loans that these banks could make.¹⁴⁴ Access to credit was also diminished during this era as community banks, thrifts, and credit unions were forced to compete with the large bank-

broaden[ing] the power of savings and loans, in the hope that S&Ls could earn their way out of trouble”).

139 *Id.* at 270 (citing James R. Barth et al., *Moral Hazard and the Thrift Crisis: An Analysis of 1988 Resolutions* (Washington: Off. Pol’y & Econ. Res., Fed. Home Loan Bank Board, FHLBB Research Paper No. 160 (1989))).

140 Fred E. Case, *Deregulation: Invitation to Disaster in the S&L Industry*, 59 *FORDHAM L. REV.* S93, S104–05 (1991) (“The FHLBB did little to enlighten the debates over deregulation because it quickly chose to advocate deregulation under the influence of its politically appointed chairmen. . . . [T]he deregulation concept was adopted first and most enthusiastically by FHLBB Chairman Preston Market, and was promoted in varying degrees by succeeding chairmen.”).

141 *See id.* at S96 (noting the FHLBB’s position that “[we] see less need for regulation because there will be more market discipline” and “[t]he most important economic factor affecting mergers in the 1980s will be increased competition”).

Hawke, Jr., Comptroller of the Currency, to Barney Frank, Ranking Member, Committee on Financial Services, U.S. House of Representatives 1–2 (Aug. 2004), *available at* <http://www.occ.gov/static/interpretations-and-precedents/aug04/int999.pdf>; *see also* Elizabeth Warren, *Unsafe at Any Rate*, 5 *DEMOCRACY J.* 14–16 (2007), *available at* <http://www.democracyjournal.org/pdf/5/Warren.pdf> (discussing the inability to pass legislation during this time that would protect consumers and noting that the “main mission” of the OCC and OTS is to “protect the financial stability of banks and other institutions, not to protect consumers”).

ing sector.¹⁴⁵ These banks either closed or changed their public-serving mission during this time, withdrawing from underserved communities in search of higher profits.¹⁴⁶

Ultimately, this period of deregulation resulted in an asymmetrical erosion of the social contract with banks. The revisions abrogated many of the safety and soundness regulations and public-serving obligations imposed on banks, but did not take away the government safety net, such as FDIC insurance and access to the Federal Reserve discount window. To be fair, many bankers and supporters of deregulation advocated for a complete market model and an imposition of market discipline without any government support.¹⁴⁷ However, policymakers, wary of the bank failures so common prior to FDIC insurance, continued to support government insurance.¹⁴⁸ Thus, a lopsided arrangement was forged between banks and the state and continued until it was fully tested in 2008.

To maintain profitability, several bedrock principles of banking policy were sidelined. First, the principle of avoiding concentrations of power was abandoned, despite its centrality to Jefferson's and Brandeis's fears¹⁴⁹ and its recognition as a guiding principle of several acts of banking legislation.¹⁵⁰ Geographic expansion and bank mergers were encouraged by regulators to allow banks to compete with non-banks. Second, the separation of banking and commerce was also partially repealed.¹⁵¹ Strict separation of commerce and banking within the banking structure gave way to more "competitive" and "efficient" structures that increased complexity and opacity in banking.

145 See CASKEY, *supra* note 103, at 8 (discussing the effect of deregulation on traditional banks in increasing pressure on them to pay higher interest rates and shut down access to traditional banking services); Case, *supra* note 140, at S97 (noting that "deregulation was a disaster for the traditional S&Ls" as it forced them to perform their "traditional S&L functions" in an environment that forced more high-risk investments and returns).

Slowly, the “Thou Shalt Not’s” of Glass-Steagall were replaced with a more fluid system that depended on firms’ internal models of risk weighing.¹⁵² Regulation in this area became increasingly complex, but the strong drift was in the direction of more flexibility and discretion in enforcing standards.¹⁵³

The results of these reforms set the stage for calamity. For several decades, banks became very profitable and the financial world grew exponentially as barriers were removed.¹⁵⁴ Even so, bank failures started to occur much more commonly during the deregulatory era. Empirical researchers have found that “the probability of a banking crisis occurring was similar during 1880–1913 and 1973–97 . . . and essentially zero during 1945–71.”¹⁵⁵ Then came the financial crisis of 2008. This crisis was the culmination of two decades of bank deregulation. But the response to the crisis was not the response that would match the deregulatory philosophy. Instead of allowing the market to enforce its discipline and allow banks to fail, as was dictated by the repudiation of the social contract, the government stepped in and bailed out the banking industry.

The 1980s brought, in effect, an abandonment of both the conceptual vision of banks as inextricably bound to the state and the practical emphasis on steady and conservative (and thus public-protecting) approaches to banking regulation that took hold after the Great Depression.¹⁵⁶ During this

153 See *id.* at 7 (explaining the growing complexity of banking regulation); Mark S. Weisman & Ann M. Dougherty, *Banks and Bank Holding Companies: Going for Brokerage Under Glass-Steagall*, 4 ANN. REV. BANKING L. 315, 320 (1985) (“[New securities instruments] challenged the regulators to exceed the bounds of historical definitions that were previously used to determine the scope of Glass-Steagall’s prohibitions so that banks would be able to keep pace with competition in an evolving marketplace. Although the language and legislative history of Glass-Steagall both demonstrate that Congress intended to leave little discretion to regulators, recent interpretations by the OCC and Board have attempted to limit the original scope of these prohibitions.” (footnotes omitted)). The authors further explain the functional and contextual approaches to regulation developed in the 1980s. “This approach, however, ‘invites an individualized definitional process under the Act and endorses, *de facto*, a substantial degree of administrative agency discretion to apply the Act on the basis of changed situations and evolving circumstances.’” *Id.* at 323 (quoting Harvey L. Pitt & Julie L. Williams, *The Glass-Steagall Act: Key Issues for the Financial Services Industry*, 11 SEC. REG. L.J. 234, 259 (1983)).

154 See Garten, *supra* note 118, at 521 (noting that the banking industry was highly profitable for a long time under the “regime of traditional regulation”).

155 GROSSMAN, *supra* note 22, at 266 (citing Michael Bordo et al., *Is the Crisis Problem Growing More Severe?*, 32 ECON. POL’Y 53–82 (2001)).

156 For a thorough account of the changes that occurred during the deregulatory era including conglomeration, increased risk, and reduced regulatory oversight, see Wilmarth, *supra* note 120.

timeframe, which spanned the mid-1970s until the crisis of 2008, bankers were agitated to be relieved of certain aspects of the social contract.¹⁵⁷ Banks asked to be freed from onerous government restrictions.¹⁵⁸ They sought to be treated more like ordinary corporations and less like public utilities.¹⁵⁹ They got what they wanted for the most part as many century-old restrictions on operations were abandoned.¹⁶⁰ At best, deregulation brought mixed, and some would say, disastrous results.¹⁶¹ Banks started to fail in high pre-Depression numbers.¹⁶²

The bank deregulation that took hold in the 1980s was not just an experiment in the ongoing effort to find the right balance of government involvement in private markets as conditions change over time. Rather, it reflected a foundational shift from both the conceptual and the practical understanding of banking that has run through our nation's history. To be sure, this program of deregulation might have been driven by a public-regarding effort to help society as a whole by increasing bank competitiveness, fostering the development of new bank products, generating expanded capital formation, and increasing economic efficiency. But in all of this, policymakers lost their way because they lost sight of the special social contract that must exist with banks.

The above history makes the case that there has been a social contract between the government and the banks. This arrangement has evolved with the needs of the nation as well as the economy. The basic outline of the

See Alan Greenspan, *We Will Never Have a Perfect Model of Risk*, FIN. TIMES (London), Mar. 17, 2008, at 13.

162 “[T]he probability of a banking crisis occurring was similar during 1880–1913 and 1973–97, approximately double this rate during the turbulent interwar period of 1919–39, and essentially zero during 1945–71.” GROSSMAN, *supra* note 22, at 266 (citing Bordo et al., *supra* note 155, at 53–82).

social contract has been that in exchange for protection from the state, banks would provide economic services to meet certain public needs and be subject to restraints. Below, the Article will explore the present day social contract. First, I will define why such a social contract does and should exist today—why banks and the government still need each other. Second, I will make the case that the safety net that exists today was not meant to support the large banks that currently dominate the market. And finally, I will propose that either the banking structure should be modified to match the safety net provided or a new social contract should be forged—one that recognizes safety and soundness, consumer protection, and access to credit as its principal tenets.

II. DEFINING THE SOCIAL CONTRACT

This Part provides the justification for enforcing a social contract between banks and the state. The state needs banks to perform specific functions that enable trade and commerce. Banks, in turn, need both government recognition and a safety net to gain consumer trust. The government safety net involves a permanent system that provides insurance and liquidity for banks to enable them to withstand economic stress and customer runs. This part of the safety net has operated without much controversy since the Great Depression.

The second part of the government safety net is a more recent phenomenon and involves discretionary emergency bailouts.¹⁶³ Though new, bailouts are likely to continue because their primary recipients are the largest U.S. banks that control the majority of banking assets and whose failures would cause many problems. Their status as likely bailout recipients is demonstrated in their epithet, “Too Big To Fail” (TBTF). This Part makes the claim that the full government safety net needs to be accounted for in constructing a social contract suited for the modern banking world.

A. *The State Needs Banks*

Basic economics explains why the government needs a well-functioning banking sector. Adam Smith, in *Wealth of Nations*, declares: “It is not by augmenting the capital of the country, but by rendering a greater part of that capital active and productive than would otherwise be so, that the most judicious operations of banking can increase the industry of the country.”¹⁶⁴ Joseph Schumpeter posits that “[the banker] stands between those who wish

163 See Gretchen Morgenson, *One Safety Net that Needs to Shrink*, N.Y. TIMES, Nov. 4, 2012, at BU1 (noting that Dodd-Frank “widened the federal safety net” by providing several clearinghouses with the authority to access the Federal Reserve’s fund in a period of crisis); Review & Outlook, *Harry’s Bank Bailout*, WALL ST. J., Dec. 11, 2012, at A18 (discussing Senator Harry Reid’s attempt to renew a 2008 emergency bailout program for banks and their wealthiest customers).

to form new combinations and the possessors of productive means. He is essentially a phenomenon of development . . . [The banker is] the ephor of the exchange economy.”¹⁶⁵ Banks create money¹⁶⁶ and credit¹⁶⁷ as they turn consumer deposits into loans. There is even evidence that banking activity not only enables but spurs real economic development.¹⁶⁸

Banks facilitate efficient trade and transaction-making and enable the flow of resources across the economy. Banking is also the medium through which the government, through the Federal Reserve, can implement fiscal and monetary policy.¹⁶⁹ Therefore, the government needs banks to have a stable-growth economy, credit accessibility, and uniform monetary policy.¹⁷⁰ Moreover, banks operate with heightened leverage and their failure is much more problematic than that of other businesses because of systemic risk and monetary supply concerns.¹⁷¹ Thus, the state has an interest in ensuring against this failure—an interest that doesn’t exist for other commercial entities. Governments protect banks because they need them to be stable.

In his 1980 and revised 2000 essays *Are Banks Special?*, Gerald Corrigan, former Chairman of the Federal Reserve of New York, places banks at the center of the economy and justifies stringent supervision of banks because of their unique status as intermediaries.¹⁷² He proposed three characteristics that made banks “special.” First, they issue transaction accounts (i.e., they hold liabilities that are payable on demand at par and that are readily trans-

172 Corrigan, in articulating this point, was reacting to the market pressure to deregulate banks and was attempting to take a stand against those who claimed that banks should be treated like corporations. E. Gerald Corrigan, *Are Banks Special?*, FED. RESERVE BANK OF MINNEAPOLIS ANN. REP. (Jan. 1982), <http://www.minneapolisfed.org/pubs/ar/ar1982a.cfm> [hereinafter Corrigan, 1982]; E. Gerald Corrigan, *Are Banks Special? A Revisitation*, FED. RESERVE BANK OF MINNEAPOLIS (Mar. 1, 2000), http://www.minneapolisfed.org/publications_papers/pub_display.cfm?id=3527 [hereinafter Corrigan, 2000].

ferable to third parties).¹⁷³ Second, they are the backup source of liquidity for all other institutions, financial and nonfinancial.¹⁷⁴ Third, they are the transmission belt for monetary policy.¹⁷⁵ As Corrigan points out, the functions of a bank are too important for banks to be regulated like other market entities.¹⁷⁶ In his essays, Corrigan states that “the presence of the public safety net uniquely available to a particular class of institutions also implies that those institutions have *unique public responsibilities* and may therefore be subject to implicit codes of conduct or explicit regulations that do not fall on other institutions.”¹⁷⁷

B. Banks Need Governmental Support

Banks invest in long-term, illiquid assets (i.e., loans) and pay for these assets using short-term liabilities (i.e., deposits).¹⁷⁸ Banks provide businesses and individuals with production-driving liquidity by investing in their illiquid assets.¹⁷⁹ This structure exposes banks to runs.¹⁸⁰ Banks rely on the statistical probability that not all depositors will seek to reclaim their funds at one time.¹⁸¹ But public fears of bank insolvency can sometimes erode depositor trust, causing runs and potentially a bank’s bankruptcy.¹⁸² Banks have used various tactics throughout their history to appear trustworthy to their customers who need to be induced to place their hard-earned money in a bank’s care. Early banks would display their specie, i.e. gold, for all to see or open the vault door to reveal their piles of currency or build marble buildings and gold safes to give the appearance of unlimited funds.¹⁸³ Some art history literature suggests that many banks are made to look like Greek temples to create the appearance that they have always been and always will be.¹⁸⁴ For

many years after the Great Depression, banks discouraged their employees from working at night lest the public perceive trouble at a bank.¹⁸⁵ Bankers understood that bank runs were not a result of actual insolvency, but the result of fear, perceived insolvency, or even another bank's failure.¹⁸⁶ Even the safest bank could experience a run if the public's confidence faltered.¹⁸⁷ Therefore, public perception of the safety of banks is the linchpin to a successful banking sector.¹⁸⁸

How does the banking system secure public confidence? Through government sponsorship and financial support. The currency of banks is trust. The monetary system falls apart when trust is lacking.¹⁸⁹ Diminished trust in the banking system and in the ability of banks to honor contracts and credit agreement leads to diminished lending and catastrophic financial consequences.¹⁹⁰ An important element of the public's trust in the banking system derives from the public's knowledge that banking is heavily regulated and overseen by the government. People trust banks because they know that the government watches over them closely—for example, that the FDIC inspects banks and enforces regulations. In addition, the government provides a safety net to struggling banks.¹⁹¹ This is the primary reason that the government bailed out the banking system: to restore trust in the nation's banks.

The government uses several methods to instill public trust in the banking sector. Some are day-to-day measures, such as oversight and deposit insurance, and some are emergency measures used during times of systemic failure. The various components of the standard and emergency safety net for banks are outlined below. They include deposit insurance, Federal Reserve liquidity support, and bailouts.

1. Deposit Insurance

Perhaps the most direct way banks have garnered consumer trust is through government guarantees. Deposit insurance started in the U.S. on the state level in 1829,¹⁹² but it wasn't until the Great Depression that the

federal government, through the FDIC, began to insure bank deposits against losses.¹⁹³ Deposit insurance immediately reduced bank runs without interfering with the banks' asset liability structure.¹⁹⁴ By removing depositors' fears of loss, deposit insurance effectively eliminates any incentive they might have to withdraw their funds before they are needed.¹⁹⁵ Moreover, deposit insurance reduces systemic risk caused by a lack of confidence in the entire banking industry during times of economic distress.¹⁹⁶

Federal insurance has also been more effective than either state or private deposit insurance. Private insurance schemes have not been attempted on a large scale and have not been successfully implemented on a small scale.¹⁹⁷ Economists Diamond and Dybvig, in their seminal work on deposit insurance, conclude that deposit insurance is best administered by the government and that "competitive markets cannot provide this liquidity insurance"¹⁹⁸ for a variety of reasons, but especially because a "private insurance company is constrained by its reserves in the scale of unconditional guarantees which it can offer."¹⁹⁹ State insurance funds have also been unsuccessful. Several states have tried to implement deposit insurance systems, but none were able to survive a systemic crisis.²⁰⁰ The FDIC has an advantage over state schemes because of its larger size and its ability to access liquidity through the Treasury Department and the Federal Reserve.²⁰¹

It is of course possible to have a banking system that does not rely on deposit insurance—one that is closer to a free market ideal. Even today, some industry observers continue to denounce deposit insurance.²⁰² These free-market advocates would like to see the momentum of the deregulatory era accelerated and fully actualized. Removing deposit insurance, they claim, reduces moral hazard because it allows for market discipline.²⁰³ Removing government support from the banking system would certainly eliminate the moral hazard issues and possibly reduce some of the inefficiencies in banking that excess regulation has caused. But this arrangement would be a reversal of a century-old banking framework. It would be a new relationship altogether—similar to the one that corporations generally have with the state. Corporations are taxed and regulated to prevent harm to consumers, but not protected by the state in the same way as banks. This is not to say that such an arrangement could not be attempted again and perfected, but it would be a marked departure from the banking policy of this country. Most observers agree, moreover, that deposit insurance is the best way to keep the banking sector stable and reliable.²⁰⁴ Indeed, every developed country has a deposit insurance scheme in place.²⁰⁵

And while this Article makes the case for a renewed and well-defined social contract, some have suggested that in the case of deposit insurance, ambiguity of the terms of the contract is preferable.²⁰⁶ For example, a fire insurer will require the insured home to install smoke detectors in order to minimize moral hazard.²⁰⁷ But in the absence of a working smoke detector, moral hazard could also be significantly reduced if a homeowner were not certain that the insurer would compensate for losses if the house were destroyed. Historically, the relationship between the bank and its insurer has not been clearly defined, with some contending that this “constructive ambiguity” in which “a rescue is by no means certain, can help alleviate moral hazard.”²⁰⁸ This argument certainly justifies ambiguity of terms for small and

ON REG. 1, 22 (1995) (describing the theory that “constructive ambiguity” can reduce perverse incentives created by regulation).

207 GROSSMAN, *supra* note 22, at 85.

208 *Id.*

mid-sized banks that go through the FDIC resolution process and are not assured survival. In other words, many small and mid-sized banks have been allowed to “burn.” However, as I demonstrate below, failures of large banks have not been as prevalent. Indeed, bailouts of large firms are increasingly understood to be inevitable, which makes it very difficult to reduce moral hazard by relying on uncertainty. Therefore, a better approach with these large banks for which moral hazard runs high is to be clear on what their obligations are—it is better to install working smoke detectors because the rescue is likely and expensive.

2. Federal Reserve Liquidity Support

Struggling banks are also given government support in their day-to-day operations. The Federal Reserve provides favorable term rates to banks in distress to alleviate their temporary liquidity problems.²⁰⁹ The Federal Reserve can provide this support to banks by providing an antidote to bank runs through its discount window.²¹⁰ To meet the needs of its creditors, a bank would otherwise have to sell its illiquid assets at a substantial discount, or a “fire sale,” often accelerating a bank’s decline. The discount window can prevent this slide into insolvency by providing liquidity as a lender of last resort.²¹¹ Instead of the bank selling its assets at liquidation prices, it can borrow from the Federal Reserve discount window and present its assets (subject to Federal Reserve approval) as collateral, usually at a “haircut.”²¹² Therefore, the Federal Reserve can provide otherwise unavailable capital assistance in times of systemic stress, thus effectively subsidizing the banking sector.²¹³ When other corporations experience financial distress or failure, they also need credit and they often get it through Chapter 11 or other bankruptcy restructuring. However, the credit they receive is given at a higher

209 The Federal Reserve discount window gives loans to banks that are secured by collateral, such as government securities or other high-quality debt. The Fed also discounts eligible paper at low rates approved by the Fed. See FED. RESERVE SYS., *Alternative Instruments for Open Market and Discount Window Operations* 3-29 to 3-33 (Dec. 2002), available at http://www.federalreserve.gov/boarddocs/surveys/soma/alt_instrmnts.pdf.

210 “The Discount Window is the long-standing program through which the twelve Federal Reserve Banks make short-term loans (often overnight) to depository institutions, and it can serve as ‘an emergency, back-up source of liquidity’ for borrowing depository institutions that lack other options.” *Bloomberg, L.P. v. Bd. of Governors of the Fed. Reserve Sys.*, 601 F.3d 143, 145 n.1 (2d Cir. 2010); see also Diamond & Dybvig, *supra* note 97, at 417 (describing the discount window and its role as a lender of last resort).

211 Haldane & Alessandri, *supra* note 97, at 3.

212 A “haircut” is a discount applied informally to the market value of a firm’s collateral in order to account for the risks of the loan. *The Federal Reserve Discount Window*, FED. RESERVE DISCOUNT WINDOW, <http://www.frbdiscountwindow.org/discountwindowbook.cfm?hdrID=14&dtlID=43#introduction> (last updated Mar. 18, 2012).

213 This support creates a significant moral hazard. See, e.g., SCHOONER & TAYLOR, *supra* note 191, at 60–66 (“The moral hazard is that the insured will allow him or herself to incur greater losses knowing that a third party is footing the bill.”); Cheryl D. Block, *Measuring the True Cost of Government Bailout*, 88 WASH. U. L. REV. 149, 224–25 (2010).

than normal interest rate. The discounted rates banks receive give them a subsidy as compared to other firms.

In the event of industry wide strain, the Federal Reserve creates an additional safety net by providing liquidity to banks.²¹⁴ This window was used often by the largest banks during the recent crisis. The Federal Reserve lent upwards of \$13 billion to struggling banks during this time to alleviate the credit crunch.²¹⁵

3. Bailouts

In addition to the permanent bank safety net, governments bail out banks in times of emergency. Some bailouts of the nation's banks have occurred through formal measures, such as TARP, which I address below. But authorities can use "soft" bailout strategies as well. In 2008, for example, the Federal Reserve established several lending facilities pursuant to its emergency statutory power under section 13(3) of the Federal Reserve Act.²¹⁶ These programs significantly expanded the federal safety net because several of them, including the largest, Term Securities Lending Facility (TSLF), were designed to grant nonbanks (or non-depository financial institutions) access to the Federal Reserve's liquidity support facilities, such as the discount window discussed above.²¹⁷ These funds went directly to the largest U.S. financial institutions, now operating as Bank Holding Companies (BHCs).²¹⁸ These facilities operated at a high balance of \$923 billion in 2008 and 2009, but have a current balance of \$55 billion.²¹⁹ In other words, one of the lessons of the 2008 financial crisis was that the federal safety net may, under

214 During the recent crisis, the federal discount window was opened to both banks as well as shadow banks that needed liquidity to avoid failure. *The Federal Reserve's 'Breathtaking' \$7.7 Trillion Bank Bailout*, THE WEEK (Nov. 28, 2011), <http://theweek.com/article/index/221883/the-federal-reserves-breathtaking-77-trillion-bank-bailout> [hereinafter THE WEEK].

certain circumstances, be extended to any institution that borrows short to lend long, especially if that institution is deemed TBTF.²²⁰

Although FDIC insurance was an effective (and arguably the most effective) measure against runs in the banking industry, it could not prevent the most recent financial run and is no longer enough because the recent crisis involved large financial firms “running” other financial firms.²²¹ The implications for the social contract are clear: the state chose to preserve trust in the banking system instead of letting these large firms fail or go through the bankruptcy process. And they did so because they thought they had no choice.²²² Bailouts were therefore politically and economically expedient.²²³ Bailouts are “an inevitable feature of modern economies [because] the interconnectedness of firms means that the entire economy bears the risk of an individual firm’s failure.”²²⁴ Although the government has recently forsaken any future bailouts, the economic realities of banking make it clear that bailouts are sometimes a political necessity and cannot be regulated away.²²⁵

One way to address the problem of soft or discretionary but inevitable bailouts is to force large financial institutions to pay for them *ex ante*. Most insurance funds, including the FDIC fund, work this way. Insured entities pay premiums for the insurance, and these premiums are adjusted based on

220 See Block, *supra* note 213, at 224–25 (discussing the “implicit guarantees” created by the most recent bailouts). The typical government safety net has historically only applied to the traditional banking system (i.e., commercial banks), but the recent crisis was not a crisis of commercial banks. Instead, it was centered on the shadow banking sector, or in other words, the largest U.S. banks, which are now BHCs. See Gary Gorton, Slapped in the Face by the Invisible Hand: Banking and the Panic of 2007, at 1 (May 9, 2009) (unpublished manuscript), available at <http://ssrn.com/abstract=1401882>.

224 *Id.*

225 Block, *supra* note 213, at 154; Levitin, *supra* note 223, at 439 (“Law is an insufficient commitment device for avoiding bailouts altogether. It is impossible to produce binding commitment to a preset resolution process, irrespective of results. The financial Ulysses cannot be bound to the mast. Although we may want Ulysses to be bound to the mast when the sailing is smooth to avoid the sirens’ call of politically directed state intervention in the market, the situation changes once the ship has hit the rocks. Once the ship is foundering, we do not want Ulysses to be bound to the mast, lest he go down with the ship and drown.” (footnotes omitted)).

the risks posed to the insurance fund—bad drivers pay more for car insurance than good drivers. Likewise, risky banks pay more than safer banks.²²⁶ A similar system could be set up to formalize emergency bailouts. However, this solution is problematic and perhaps unrealistic for at least two reasons. First, all parties must recognize that these bailouts will continue to occur. Policymakers have not conceded this in the aftermath of the crisis. In fact, they have made repeated declarations that they will no longer bail out the banks.²²⁷ Second, there must be a way to price accurately for the risks posed by the specific institution. After the crisis, many of the metrics used to predict bank risk, such as capital and comprehensive CAMELS ratings,²²⁸ have come under attack because many of the banks that failed met these requirements right up until the point of failure.²²⁹

Despite these difficulties, the premise that future bailouts need to be accounted for today in structuring bank regulation is at the heart of the social contract. Recognizing that bailouts will always be a part of the bank/government partnership since banks have become TBTF is a crucial starting point in framing the social contract. Because such bailouts are inevitable, large banks and their rescuing government need to clarify the terms of their relationship. Otherwise, it is likely that when banks are in smooth waters and bailouts are not needed, they will tend to forget their tie to the government and the populace and focus only on profits instead of the needs of the public.

a. TARP

Although the bailout of the nation's financial firms involved a variety of measures, including expanded access to the federal discount window and increased FDIC deposit limits,²³⁰ the largest component of the bailout was

the Troubled Asset Relief Program (TARP). In England, Paul Tucker urged all banks to “recognise that their relatively calm passage through the crisis to date owes a lot to government standing behind their peers.”²³¹ The same is true here, and the government accomplished the rescue mainly through TARP. Through TARP, the federal government under two administrations invested approximately \$431 billion to shore up the nation’s banks.²³² Most of these funds went to the largest banks.²³³ As mentioned above, and as codified in the law, one of the main justifications for TARP was to provide mortgage relief to cash-strapped homeowners.²³⁴ Instead, these funds went to shore up large banks through government purchase of their liabilities and through cash infusions.²³⁵

In giving this aid to the large banks, the government never explicitly demanded anything in return, and it quickly became apparent that banks would not use these funds for public-serving purposes. Instead, they shored up their balance sheets by saving their cash for a rainy day.²³⁶ Soon, the public also learned of bonuses given to bank executives with TARP funds.²³⁷ Clearly, the banking sector, which was not accustomed to meeting public needs, rejected their intermediary function—that it was their responsibility to take these government funds and lend. *The New York Times* quoted one banker and recipient of \$300 million in TARP funds stating: “Make more loans? . . . We’re not going to change our business model or our credit policies to accommodate the needs of the public sector. . . .”²³⁸ Neither did the Treasury make any demands that the money be used to reach the public.²³⁹ Treasury Secretary Timothy Geithner seemed satisfied that banks were

There were no strings attached: no requirement or even incentive to increase lending to home buyers,

returning to profitability and used that as a metric for measuring success.²⁴⁰ Some inside the administration²⁴¹ and outside²⁴² challenged this perspective and claimed that the funds should have gone to taxpayers directly and not to poorly managed banks. But to date, policymakers have not proposed that banks should have been obligated to use the government money to help the public, even if that would have hurt their bottom line.²⁴³ The Treasury seemed to believe that the most it could ask of banks is to stay profitable and then to hope that once they are profitable enough, they would start to lend to the public.²⁴⁴ For example, in discussing mortgage modifications, the Treasury discussed the program as one that would be good for consumers and also better for banks because they would be able to avoid costly foreclosures.²⁴⁵

C. *The Post-Crisis Social Contract*

The post-crisis reforms have not fundamentally changed the status quo with respect to banks' duties to the public. However, a new relationship has been formed between the large banks and the government. Due to several new reforms, the large banks and the government are now working together in designing banking regulation. Below, I will describe the new reforms, the nature of the TBTF problem, the effect of these banks on government policy, and the reasons the new government-bank partnership is not likely to be public-protecting.

and against our strong recommendation, not even a request that banks report how they used TARP funds.”).

Agency, at 1 (July 31, 2012) (attached to Letter from Timothy Geithner, Secretary, Dep’t of the Treasury, to Ed DeMarco, Acting Director, Fed. Hous. Fin. Agency (July 31, 2012)), *available at* blogs.reuters.com/felix-salmon/files/2012/07/Sec-Geithner-Letter-to-FHFA-on-Principal-Reduction.pdf (“The available evidence on HAMP-PRA, as well as industry practice, indicates that targeted principal reduction makes economic sense for the holder of the credit risk.”).

1. Dodd-Frank

Dodd-Frank was the regulatory response to the financial crisis of 2008. Although it attempts to ensure financial stability and banking accountability, it is widely regarded as falling short of those goals.²⁴⁶ Some claim that the act introduces complexity that not only misses big problems, but also increases costs of compliance.²⁴⁷ Others claim that these reforms are not likely to end future bailouts or restore safety and soundness.²⁴⁸ Above all, Dodd-Frank was a missed opportunity for the government to reassert its relationship with the nation's banks.²⁴⁹

Dodd-Frank and other post-crisis regulatory reforms have not addressed the proper question—specifically, what duties do banks owe to society? Instead, assuming that the status quo is tenable, policymakers have plugged holes and filled gaps in a tattered and spent regulatory structure created during the deregulatory era. Indeed, there were public humiliations focused on

246 See DAVID SKEEL, *THE NEW FINANCIAL DEAL* 140–41 (2011) (explaining that Dodd-Frank encourages delay and bailout rather than truly holding banks accountable); Brett H. McDonnell, *Financial Regulation Reform and Too Big to Fail*, 1 AM. U. BUS. L. REV. 113, 113 (2012) (suggesting that “the leading critique of the Dodd-Frank Act from the left is that it does too little to address the problem of too big to fail (TBTF) financial institutions”); Arthur E. Wilmarth, Jr., *The Dodd-Frank Act: A Flawed and Inadequate Response to the Too-Big-to-Fail Problem*, 89 OR. L. REV. 951, 956 (2011) (concluding that Dodd-Frank is ultimately too weak to prevent the “too big to fail” problem and noting that “[t]his critique is not unique to the left—many on the right make similar arguments”); *The Dodd-Frank Act: Too Big Not to Fail*, THE ECONOMIST, Feb. 18, 2012, at 22, available at <http://www.economist.com/node/21547784> (arguing that the Dodd-Frank Act attempted to address needed regulation in the banking industry, but that is has become clear that the “risk that the harm done by the massive cost and complexity of its regulations, and the effects of its internal inconsistencies, will outweigh what good may yet come from it”).

247 Haldane & Madouros, *supra* note 152, at 12.

248 See SKEEL, *supra* note 246, at 140; Eugene A. Ludwig, *Assessment of Dodd-Frank Financial Regulatory Reform: Strengths, Challenges, and Opportunities for a Stronger Regulatory System*, 29 YALE J. ON REG. 181, 192 (2012) (“Dodd-Frank, however, severely overcompensates for lax regulation. Too many of the legislation’s components are largely unnecessary, and its sheer magnitude could actually challenge safety and soundness by focusing an excessive amount of management attention on less critical issues.”); Jonathan R. Macey & James P. Holdcroft, Jr., *Failure Is an Option: An Ersatz-Antitrust Approach to Financial Regulation*, 120 YALE L.J. 1368, 1389 (2011) (“In fact, there is reason to believe that the Dodd-Frank Act actually will increase the probability that financial institutions in general, and insurance companies in particular, will be bailed out in the future.”); Mark A. Calabria, *Dodd-Frank Law: Regulations Won’t Fix What’s Wrong*, PHILA. INQUIRER (Dec. 5, 2011), http://articles.philly.com/2011-12-05/news/30477992_1_fannie-and-freddie-consumer-financial-protection-bureau-housing-bubble (arguing that the safety and soundness provisions of Dodd-Frank are misguided).

249 SKEEL, *supra* note 246, at 94 (emphasizing that “the Dodd-Frank Act invites the government to channel political policy through the big financial institutions by giving regulators sweeping discretion in the enforcement of each of the provisions [that have been previously discussed]”).

individual wrongdoing by bank executives,²⁵⁰ lawsuits exposing banks' fraud and malfeasance,²⁵¹ and a myriad of explanations of the crisis.²⁵² But the dominant assumption remained that foremost among policymakers' concerns was that the large banks remain stable and profitable.²⁵³

The relationship between the government and its banks has been misunderstood for so long that even those reforms that Dodd-Frank has advanced have been met with strong opposition not just from Wall Street,²⁵⁴ but also from Congress, other regulators,²⁵⁵ and the federal circuit courts.²⁵⁶ Wall Street lobbyists, many of whom are ex-regulators, vigorously fought the new rules on behalf of banks right after those banks were bailed out by the federal government.²⁵⁷ Follow-up lobbying weakened the reforms and secured

enough loopholes in the remaining legislation to allow business as usual to continue for these banks.²⁵⁸ Congress, which passed Dodd-Frank, also opposed funding and appointing a director to the agency meant to enforce its provisions.²⁵⁹

To be sure, reforms are under way. Many will aim to make banks safer and protect consumers.²⁶⁰ In Part IV, I outline several of the major reforms put in place by Dodd-Frank, including the Consumer Financial Protection Bureau (CFPB) and other safety and soundness measures meant to reduce risks and increase transparency.

2. Too Big To Fail

The social contract outlined above has worked fairly well with the small and mid-sized banks of this country, but has failed with respect to large banks. This is in part due to the fact that these large banks are recent additions to the banking fold. Many of these large banks were operating as investment banks, but they are now bank holding companies: many of them hold depository institutions (commercial banks), but their assets are also non-depository assets tied up in the securities, credit, insurance, and derivatives markets. They operate in almost every developed country in the world and they have extensive political influence. Large banks (or “mega banks”) are those with assets between \$250 billion and \$2.3 trillion.²⁶¹ There are only twelve of these behemoths after the crisis and they represent only 0.2 percent of all banks, but together they hold almost seventy percent of the country’s banking assets.²⁶²

There are several reasons for the discrepancy between small and large banks and the breakdown of the social contract with the latter. First, as their

261 Fisher, *supra* note 8.

262 *Id.*

name indicates, because these banks are too big to fail, they are too big to punish or even threaten. Regulatory discipline has failed with the large banks—these banks cannot be easily punished for their bad behavior, and therefore moral hazard runs high. Regulators have authority over these firms, but because their activities are so complex and fast-moving, regulators often cannot keep up. Small banks that are failing must submit to the FDIC resolution process, where the regulators take over a failing bank immediately and manage either its liquidation or reorganization. The process is smooth and speedy. In contrast, large banks—because so many of their assets are non-depository and tied up in capital or derivative markets all over the world—cannot easily be restructured through bankruptcy. Therefore, holding the Sword of Damocles over banks' heads is only meaningful to those who don't have the shield of being too big to fail. Dodd-Frank's living will provision promises to ensure the orderly liquidation of these large banks in the event of a future collapse.²⁶³ However, most experts are skeptical that the living wills can or will be enforced absent major reforms to the structure of these provisions as well as to these banks.²⁶⁴

Second, market discipline has also failed with these mega-banks. Richard Fisher, the president of the Federal Reserve Bank of Dallas observed of these large banks that “the forces of market discipline from shareholders and unsecured creditors are limited TBTF status exerts *perverse market discipline* on the risk-taking activities of these banks.”²⁶⁵ Because the creditors of these banks are aware of their TBTF status, they receive discounted prices and less market vigilance.²⁶⁶ Therefore, the government safety net gives TBTF banks a subsidy greater than that enjoyed by other insured banks.²⁶⁷ Moreover, the subsidy for these banks “has risen following the financial crisis.”²⁶⁸

Third, the activities of these firms are inherently more risky and more of a threat to systemic stability. These firms operate in a variety of markets in many countries, and their non-depository activities are the bulk of their balance sheets. Their size and interconnectedness expose these firms to contagion making them more vulnerable to collapse.²⁶⁹ They are also very highly leveraged with an average leverage ratio of 1 to 25²⁷⁰ compared to commer-

263 Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. No. 111-203, 124 Stat. 1376, 1423–32 (2010) (codified at 12 U.S.C. § 5365 (2012)).

264 See SKEEL, *supra* note 246, at 141 (“[M]anagers are unlikely to devise serious and realistic plans unless regulators are unusually vigilant in enforcing the new obligation [to draft a living will].”).

265 Fisher, *supra* note 8.

266 *Id.* There is also a growing sense that these firms are “too big to prosecute” as seen by the Justice Department’s reluctance to prosecute any of the large banks for malfeasance.

267 *Id.*

268 *Id.*

269 Levitin, *supra* note 223, at 463, 465.

270 Yalman Onaran, *U.S. Banks’ Leverage Should Be Halved to Cut Risks, Bair Says*, BLOOMBERG (Sept. 26, 2012), <http://www.bloomberg.com/news/2012-09-26/u-s-banks-leverage-should-be-halved-to-cut-risks-bair-says.html>.

cial banks, which have a target leverage ratio of 1 to 12.²⁷¹ In addition to their leverage, the markets in which they operate are higher risk than commercial banks.²⁷² Commercial banks still profit from traditional lending and depository activities while these large banks do everything else that makes the capital, credit, and derivatives markets run.

Finally, because of their size and importance, these banks are very politically powerful. And this power and influence is the reason the social contract is askew. In fact, the crisis augmented these banks' already growing power and influence.²⁷³ Recently, through certain measures in the Dodd-Frank Act, a new relationship has been formed between the government and the largest banks. The partnership is formed because once a firm is labeled a "systemically important financial institution" (SIFI), it is watched closely by the newly-formed Financial Stability Oversight Counsel (FSOC), which includes the leaders of all the banking regulators, but is chaired by the Treasury, the most political of the bank regulators.²⁷⁴ There are many provisions of Dodd-Frank that give FSOC unfettered discretion in regulating these firms. In effect, the SIFIs work closely with FSOC in formulating regulation and implementing reforms. These large banks will influence banking policy, and perhaps more general government policy, going forward. This is indeed the fruition of Jefferson's and Brandeis's greatest fears.

3. Corporatism

David Skeel refers to this partnership as corporatism—a conflict-prone relationship between the most powerful banks and the federal government.²⁷⁵ Corporatism strengthens bank power, size, and influence over policymakers. The partnership benefits both the large banks and the federal government. On the one hand, the largest banks get to remain large, receive a market subsidy and have the ear of the Treasury. It is also more likely these firms will be bailed out in the future. Cross-country studies support this conclusion, showing that the more connected a firm is to the rescuing institution, the more likely a bailout will occur.²⁷⁶ On the other hand, once the government gets control over large powerful institutions, it is able to use them for its own political ends, including as tools of domestic and foreign policy on issues well outside the realm of banking. Skeel uses, as an example

271 *Id.*

272 Fisher, *supra* note 8.

273 Stephen Gandel, *By Every Measure, the Big Banks Are Bigger*, CNNMONEY (Sept. 13, 2013), <http://finance.fortune.cnn.com/2013/09/13/too-big-to-fail-banks/>.

274 The Treasury is the only banking regulator that is located in the President's cabinet. It is widely regarded as being the most politically sensitive. In contrast, both the FDIC and the Federal Reserve are independent agencies. SKEEL, *supra* note 246, at 12.

275 SKEEL, *supra* note 246, at 9–11. He distinguishes Corporatism from a Brandeisian approach, which would have lessened the power of the largest banks. The modern Brandeisians advocated breaking up the banks and ending TBTF bailouts because of a fear that the banking oligarchy would use their resources to "capture" or co-opt the state. *Id.*

276 See GROSSMAN, *supra* note 22, at 97.

by analogy, the Obama Administration giving Fiat a larger ownership stake in Chrysler in exchange for its promise to promote the Administration's policy goal of energy efficiency by promising to roll out a more energy-efficient car in the U.S.²⁷⁷

This newly formed relationship, which benefits both the government and the banks leaves out a critical part of the social contract—the people. Although the government represents the people, its aims, as it relates to bank policy, may diverge from public need. This is true for many political economy reasons—such as reelection concerns, lobbying, the revolving door,²⁷⁸ and the fact that interested minorities often exert more political pressure than the diffuse populace. Thus, political aims are not always matched with the people's. This problem is exacerbated now as banks and policymakers become closer and work together to shape policy. There is necessarily a tension between the desires of banks and the desires of the public. Banks desire high profits and insofar as stability leads to profits, banks also desire stability. There is also a tension between offering profitable credit products and offering ones that are safe and fair. The public wants stability, access to credit, and fair and safe products. When these goals conflict, banking regulators must be the public representative that forces banks to meet these needs. Corporatism makes that difficult. This is the reason the social contract must be re-written to explicitly require regulators to take account of the public's needs.

4. Breaking Up the Banks

One option, proposed by many, to remedy the current problem with the large banks is for the government to break them up. Many advocate that these banks be broken up along their activity lines.²⁷⁹ For example, a large bank holding company could be broken up into several independent units, such as an insurance firm, a broker-dealer, a hedge fund, a commercial banking network, and a securities underwriter. This division harkens back to the Glass-Steagall era separation of banking and commerce. It has the advantage of containing FDIC insurance and other federal subsidies within the banking unit and preventing the FDIC subsidy from subsidizing unregulated portions

279 See, e.g., Roberta S. Karmel, *An Orderly Liquidation Authority Is Not the Solution to Too-Big-to-Fail*, 6 BROOK. J. CORP. FIN. & COM. L. 1, 44–45 (2011) (“[Stiglitz] suggests a ‘three-pronged attack’: (1) breaking up institutions that are too big to fail; (2) ‘restricting . . . activities in which [the] remaining institutions can be engaged’; and (3) correlating ‘deposit insurance and capital adequacy restrictions to [even out] the playing field.’” (alterations in original) (citation omitted)); Brad Miller, *The Right Way to Break Up the Banks*, BLOOMBERG (Oct. 21, 2012), <http://www.bloomberg.com/news/2012-10-21/use-stand-alone-subsidiaries-to-break-up-megabanks.html> (“According to Bair, megabank operations should be ‘simplified and subsidiarized’ into ‘discrete, separately managed legal entities’ based on business lines.”).

of the firm. Without the TBTF imprimatur shielding the firm from market discipline, counterparties could more easily monitor those units engaged in higher risk “commercial ventures.”

This course of action would essentially rewrite the New Deal era social contract for a changed world. Although breaking up these large firms is the best and perhaps only way to ensure systemic stability, it may not be practically or politically feasible. The financial landscape may be too changed to try to force a 1930s-era separation on these firms. In addition, it is unlikely, given the influence of these large firms, that any effort to break them up could overcome the political opposition that will likely be unleashed. This is not to say that it should not be attempted, but given the substantial barriers in achieving a break-up of the large banks, policymakers need to reconsider the social contract as it applies to the situation today.

III. REVISING THE SOCIAL CONTRACT

If the banks are to remain large and powerful and capable of causing systemic panic and collapse with only the government standing between them and failure, the government must demand more from these banks than they currently do. I propose a three part social contract. Not all of these suggestions are unique, but so far they have stood alone as independent proposals for banking reform. In reviving the social contract, the government needs to be clear that of paramount importance in banking are safety and soundness, consumer protection, and access to credit. These three pillars should define the new social contract between government and banks. This charge requires an ideological shift in our understanding of banks and the government’s regulatory mission. Banks must retain the ability to make profits for their shareholders, but that cannot be the only requirement imposed by regulators on banks. Banks do not operate in the markets like most other corporate entities. They are tasked with public functions and given access to public safety nets. They allow other corporations to increase profits and function free of state control, but they themselves are necessarily tethered to the state. And this tethering has implications that have been ignored by modern policymakers.

The ideological shift I advocate requires regulators to emphasize the public’s needs when regulating banks. The public needs banks that are safe, that are accessible to all, and that deal fairly with consumers. Regulators should ensure that banks meet these needs, even if the changes result in banks forgoing maximum profitability. This charge differs from corporatism, which as described above is the formation of a close relationship between large banks and the government that results in a quid pro quo of powers and influence. Corporatism does not ensure that public needs are met first and leads to a problematic concentration of political and economic power. On the other hand, I also do not advocate making banks into public utilities, as advocated by Brandeis. Market competition is not the enemy of sound banking. With targeted regulation, it is possible to allow banks to compete for customers and do so responsibly while meeting public needs.

A. *Safety and Soundness*

As the details of many of the regulations are still being negotiated, scholars and industry observers have suggested a variety of measures to ensure safety and soundness in banking. These proposals include prohibitions on derivatives trades,²⁸⁰ higher capital reserves,²⁸¹ contingent capital,²⁸² self-regulation,²⁸³ and more thorough regulatory oversight.²⁸⁴ Such proposals are on the right track as they do not focus on profits, but rather prohibit activities that are risky, force banks to invest in products with their own money (“skin in the game”), or call for more stringent and comprehensive supervision of banks. This Article does not advocate any particular measure, but makes the claim that a strong regulatory focus on safety and soundness must be implemented and enforced by regulators if the federal government is going to bear the costs of bank failures. The social contract must be rewritten to include such measures so long as the government has such a large stake in bank success.

As discussed above, bank profitability cannot serve as a regulatory proxy for bank safety and soundness. While it is true that a profitable bank is often a safe one and that profitability can be a good indicator of a bank’s stability, it is not necessarily so. As the last three decades have demonstrated, banks can be profitable and still engage in unsafe practices. Therefore, while profitability can signal safety and soundness, the scope of the regulatory inquiry into safety and soundness needs to be more nuanced. How can safety and soundness be measured if not by bank profitability? Before deregulation, bank safety was a matter of bright line rules and prohibitions.²⁸⁵ Safety was assured by prohibiting banks from engaging in risky business practices. Going back to those prohibitions would be like putting the proverbial genie back in the bottle.

The shadow banking system and modern financial innovation make the stark separations once laid down by the Glass-Steagall Act nearly impossible to re-create. The Volcker Rule, however, currently part of Dodd-Frank, could potentially re-impose a portion of the Glass-Steagall Act’s divisions as adapted to the modern financial system and effectively silo high-risk activities, such as

proprietary trading, from the rest of the firm.²⁸⁶ This would come short of breaking up the banks, but would at least separate activities within each large bank.

The Dodd-Frank Act does indeed focus on safety and soundness, but it is too soon to say whether its stated goals of enforcing “strict oversight of financial institutions that pose systemic risks” will lead to reduced risk-taking by these firms.²⁸⁷ Most of the Dodd-Frank reforms have yet to be implemented and, as with most financial regulation, many of these changes will be discretionary. The FSO will be responsible for overseeing systemic risk problems and for addressing those concerns with firms designated SIFIs. Will these regulators be able to spot the subprime-mortgage crisis of the future? Much will depend on whether the regulators are able to see beyond profits secured during the next bubble to identify underlying and latent risks. An analysis of whether recent reforms have shifted regulatory focus away from profits to actual risk taking is outside the scope of this Article and likely premature. Too much work on implementing these reforms remains to be done.

B. Consumer Protection

Perhaps the biggest lapse in regulatory oversight over the last thirty years has been in protecting consumers from harmful, obscure, and sometimes predatory credit products. Scholars have made a strong case that the credit markets in this country are broken, and that consumer credit products are wrought with fraud, discrimination, and unnecessary complexity.²⁸⁸ Banks and credit card companies have made their products more opaque and more costly to the average customer and because consumers cannot adequately gauge the level of risk in certain terms, they have gone largely uncontested. There have also been reports of fraud and discrimination in mortgage lending during the lead-up to the financial crisis.²⁸⁹ Large banks have been the biggest offenders because of their standardized products and their insatiable appetite for subprime loans during the housing bubble.

286 See R. Rex Chatterjee, *Dictionaries Fail: The Volcker Rule’s Reliance on Definitions Renders It Ineffective and a New Solution Is Needed to Adequately Regulate Proprietary Trading*, 8 INT’L L. & MGMT. REV. 33, 42 (2011); Macey & Holdcroft, Jr., *supra* note 248, at 1397–98.

287 Macon Phillips, *Overhaul*, THE WHITE HOUSE BLOG (Feb. 25, 2009), <http://www.whitehouse.gov/blog/09/02/25/Overhaul/>.

288 See, e.g., Bar-Gill & Warren, *supra* note 130, at 1–2 (arguing for a fundamental restructuring of consumer credit regulation including the creation of a new federal regulator); Adam J. Levitin, *Rate-Jacking: Risk-Based & Opportunistic Pricing in Credit Cards*, 2011 UTAH L. REV. 339, 365–66 (explaining why market factors have not corrected the risky practice of “rate-jacking”); Warren, *supra* note 144, at 16–18 (advocating for a Financial Product Safety Commission to protect consumers of credit products via an analogy to regulation of tangible consumer goods).

289 Savage, *Countrywide*, *supra* note 109 (noting that Countrywide settled with the Justice Department over allegations that it charged higher rates and fees to minority borrowers); Savage, *Wells Fargo* *supra* note 109 (noting that Wells Fargo settled with the Justice Department over allegations that it charged higher rates and fees to minority borrowers).

Targeted consumer protection laws can deter these banks and other financial services providers from taking advantage of their customers to make a profit. If the government is to support banks, it must assure that consumers are protected from discrimination, fraud, and predatory behavior in lending. Moreover, these reforms might actually help ensure the safety and soundness of the financial system because many of the products that are harmful to consumers are also harmful to markets and the economy in general. Subprime mortgages are an illustrative example.

A few scholars, led by now-Senator Elizabeth Warren, proposed the establishment of a new regulator to protect consumers from unregulated and unsafe banking products.²⁹⁰ These scholars point out that because safety and soundness has been equated with profitability, consumer protection is not enforced by and actually contradicts the mission of the federal banking regulators.²⁹¹ These calls for a consumer protection agency have been answered by Dodd-Frank's creation of the Consumer Financial Protection

290 See Bar-Gill & Warren, *supra* note 130; cf. Adam J. Levitin, *Hydraulic Regulation: Regulating Credit Markets Upstream*, 26 YALE J. ON REG. 143, 146 (2009) (proposing “reinvigorating the role of state regulators as consumer-protection advocates”).

This means protecting banks’ profitability. Consumer protection is, at best, a lesser priority” (footnote omitted)); Creola Johnson, *The Magic of Group Identity: How Predatory Lenders Use Minorities to Target Communities of Color*, 17 GEO. J. ON POVERTY L. & POL’Y 165, 205 (2010) (noting that federal banking regulators’ stated goal is safety and soundness, but they are usually focused on profitability and often oppose states’ attempts at consumer protection); Arthur E. Wilmarth, Jr., *The Financial Services Industry’s Misguided Quest to Undermine the Consumer Financial Protection Bureau*, 31 REV. BANKING & FIN. L. 881, 932 (2012) (“[D]uring the credit boom banking agencies focused on near-term profitability as a key indicator of the ‘safety and soundness’ of financial institutions.”); Bob Herbert, Op-Ed., *Derailing Help for Consumers*, N.Y. TIMES, Mar. 27, 2010, at A19, available at http://www.nytimes.com/2010/03/27/opinion/27herbert.html?_r=0 (describing safety and soundness as a “euphemism” for “profitability”); see also FDIC OFFICES OF INSPECTOR GENERAL, EVALUATION OF PROMPT REGULATORY ACTION IMPLEMENTATION 4, 6, 11–12, 33–37 (2011), available at http://www.federalreserve.gov/oig/files/9_30_11_PRA_Final_Issued_Report.pdf (noting regulators’ difficulty restricting risky behavior while institutions are profitable).

Bureau (CFPB). This agency is poised to play a critical role in the rewriting of the social contract with banks in the area of consumer protection if it has the support of the legislature and engages in robust rulemaking and enforcement.²⁹²

The large banks vigorously opposed this agency and continue to appeal many of its decisions.²⁹³ There were many political battles over the establishment of such an agency, making it one of the most contested aspects of Dodd-Frank.²⁹⁴ It became quickly apparent that Elizabeth Warren, whose name became synonymous with the agency, would not be chosen to lead it because the opposition from the banking sector was too strong.²⁹⁵ It is too soon to say whether the agency will remain strong in the face of mounting opposition, but its charge to protect the public from fraudulent or discriminatory banking products is a crucial tenet of the social contract.

C. Access to Credit

As stated above, post-crisis banking reform has focused on safety and soundness, and consumer protection is arguably addressed by the CFPB, whose success will be determined over time. However, neither Dodd-Frank nor any other regulatory proposal, program, or talking point has addressed increased access to credit. Although the idea has been in the background of some of the post-crisis dialogue, including in the mortgage relief context,²⁹⁶ it has not been embraced or advocated by any policymakers to date. This may have to do with a widespread belief that the financial crisis was, in part, precipitated by an overabundance of consumer access to mortgage credit.²⁹⁷ Therefore, the case for increasing access to credit is not an obvious one.

292 But as Elizabeth Warren artfully articulated, the agency must be strong in order to be effective: “‘My first choice is a strong consumer agency’ ‘My second choice is no agency at all and plenty of blood and teeth left on the floor.’” Shahien Nasiripour, *Fight for the CFPB Is ‘A Dispute Between Families and Banks,’ Says Elizabeth Warren*, HUFFINGTON POST (May 25, 2011), http://www.huffingtonpost.com/2010/03/03/fight-for-the-cfpa-is-a-d_n_483707.html.

Financial support for the banking system goes hand in hand with ensuring that the banking system remains safe and low risk. And prohibiting banks from taking advantage of customers is fairly uncontroversial. But why should government investment in banking impose duties on banks to increase access to credit? The answer is that access to credit is one of the theoretical reasons banks were supported by the government in the first place and, I argue, a reason to continue their support.

Bank credit not only allows the economy to grow wealth, but also allows individual families to do so. Any difference in access (for example, the rich having more access than the poor) runs counter to the justifications for state support of banks. It was this disparity of access that made Thomas Jefferson wary of bank power.²⁹⁸ Currently, a few large and powerful banks control the majority of assets in the banking sector and also the majority of credit.²⁹⁹ The social contract must require that these banks focus on increasing lending to the poor. Not all banks should have the same responsibilities, such as providing small loans to the poor, because not all banks are capable of executing the task. But government sponsorship of banks needs to both carve out a place for and support banks that are tasked with such a mission. As the government is currently heavily invested in large banks,³⁰⁰ it is only fair that these large banks bear some of that responsibility.

Insofar as economic mobility (or at least prohibiting economic disenfranchisement) is a social good, and credit is the necessary tool to economic advancement, banks must be involved at some level in enhancing accessibility for certain individuals and communities. The number of unbanked or underbanked (i.e., people without bank accounts or not using them) has increased since the financial crisis and is now nearly thirty percent of the population.³⁰¹ If the banking system is to be supported by the government, all should be able to access it. Of course, there are complex reasons why some people may choose to not have a bank account, such as lack of sufficient funds, class and cultural barriers, lack of trust of the banking system, etc. If these barriers are caused by the banking system, they should be eliminated, although some of these obstacles may not be surmountable by regulating bodies and banks.

However important, focusing on bank accounts blurs the real needs of the poor, which are access to small loans and good credit options. Many low-income individuals are increasingly relying on fringe banks for their credit needs, and these fringe banks often engage in unscrupulous practices and

charge very high interest rates.³⁰² Many of these fringe banks are highly profitable organizations that are either partnered with or financed by the large banking sector.³⁰³ Access to safe credit is crucial in allowing the poor to escape poverty. The premise of supporting banks with government funds is that they act as intermediaries in the economy—allowing businesses and individuals to use their services to grow their limited funds. Currently, the U.S. banking system is bifurcated with one regulated and government-sponsored banking system for the rich and another unregulated, usurious, and costly fringe banking system for the poor. To be clear, lending to the poor is not always profitable. A bank spends the same amount of resources lending \$1000 or \$100,000.³⁰⁴ Therefore, rational profit-seeking banks wisely focus on larger loans leaving the smaller loans to the payday lenders and others who are willing to take on this risk for the high profits earned through usurious interest rates and other questionable practices.³⁰⁵

In the past, the federal government has supported specific banking charters aimed at providing credit to the poor. Charters for credit unions and savings and loan associations were both created after the New Deal to accomplish this very purpose.³⁰⁶ These financial institutions served low-income customers who did not otherwise have access to credit in accordance with a social contract meant to extend the banking safety net to all citizens. These banks were successful for many years but, due to financial pressure in the 1970s and 1980s and their subsequent deregulation, many struggled to survive.³⁰⁷ There are currently few banks designed primarily to provide access to the poor while the unbanked population steadily increases.³⁰⁸

There are many possible ways that the banking system in partnership with the federal government could achieve the goal of increased access to safe credit for the poor.³⁰⁹ Specialized charters could be subsidized by either the FDIC fund, which collects fees from larger banks, or nonprofit arms of large banks or stand-alone subsidiaries of larger banks could be established with specific charters focused on credit access for the poor. Providing small loans to the poor is not profitable and therefore traditional banks will not step in to fill this gap unless incentivized to do so. Yet, because banking has public support, banks can fairly be asked to fulfill this important public mission.

In sum, the social contract with banks must take into account the needs of the public, and that means *all* of the public. The social contract must first be understood and then verbalized by regulators. This will require a shift in regulatory focus. Specifically, regulators should consider public needs, such as safety and soundness, consumer protection, and access to credit, when using their discretionary powers to allow banks to perform certain activities. This public focus should also be reflected in legislation and regulation governing banks. Fortunately, as the next Part demonstrates, it already is. Although the necessary language already exists in various statutes, it must now be enforced and given “teeth” by regulators.

IV. “PUBLIC BENEFIT” AND THE STATUTORY CODE

The public mission of banks is written into the text of nearly all major banking legislation.³¹⁰ For banks to gain approval for mergers, expansions, or new activities, their primary regulator uses a variety of factors to determine whether the proposed change should be permitted. Most of these tests include an explicit “public benefit” inquiry. In other words, in order to gain approval from its regulators, a bank needs to show that the proposed activity is beneficial to the public. Because much of this legislation was written during and after the New Deal, at a time when the social contract was more clear, it is not surprising that the needs of the public would be an articulated aspect of any regulatory decision.

For example, under the Bank Holding Company Act (BHCA), bank holding companies (BHCs) that wish to acquire or merge with a bank or nonbank or partake in certain nonbanking activities must undergo a public benefit test.³¹¹ The BHCA public benefit test requires affirmative public benefits rather than mere absence of adverse effects.³¹² Section 1842(c)(2) requires the Federal Reserve Board to consider “the convenience and needs of the community” affected by the merger or acquisition of a bank by a bank holding company.³¹³ The Federal Reserve’s Regulation Y also includes a

310 See *infra* Part IV.

311 12 U.S.C. § 1842(c)(2) (2012); *id.* § 1843(j)(2)(A). In order to pass the public benefits test under the Bank Holding Company Act, a bank holding company, in its application process, must prove more than simply that no adverse effects would arise; it must prove some reasonable expectation of public benefits. However, if the Board finds some adverse effects then it is required to find more than speculative or scant public benefits. *Money Station, Inc. v. Bd. of Governors of the Fed. Reserve Sys.*, 81 F.3d 1128, 1133–34 (D.C. Cir. 1996).

312 Roger E. Alcala, *Neither Convenient Nor Needed: The Convenience and Needs and Public Benefits Tests of the Bank Holding Company Act*, 96 *BANKING L.J.* 325, 328–29 (1979).

313 § 1842(c)(2). Section 1843(j)(2)(A) lays out a cost-benefit analysis of nonbanking activity or acquisition for regulators to consider such as increased convenience, competition, and efficiency that must outweigh adverse effects such as concentration of resources, unfair competition, conflicts of interest, or unsound banking practices. § 1843(j)(2)(A).

public benefit test for approving mergers or new activities by banks.³¹⁴ The test asks, for example, whether the merger or proposed activity will lessen competition or whether the change will “meet[] the convenience and needs of the community.”³¹⁵ The National Bank Act also requires the OCC to analyze public benefits, such as community development, philanthropy, and the needs of the community, when national banks are formed or acquire or merge with other national or interstate banks.³¹⁶ The Riegle-Neal Act’s public benefit test requires interstate bank merger applicants to prove that the merger will not violate concentration limits and that the applicant is in compliance with the CRA.³¹⁷

Despite the public benefit test’s salience, in practice no searching inquiry into the actual needs of the public is undertaken. In fact, the factors that are used to determine “public benefit” are those that often benefit the banks themselves. The Federal Reserve Board and the OCC have broad discretion in applying these factors on a case-by-case basis.³¹⁸ The OCC has stated that it gauges “public benefit” using a cost-benefit analysis of decreasing competition, the needs of the community, and performance of the Community Reinvestment Act.³¹⁹ Bank regulators often interpret these public benefit tests as either advancing efficiency or increased competition.³²⁰ For

314 12 C.F.R. § 225.26 (2013). Regulation Y lists public benefit factors the Board must consider when approving nonbanking proposals, such as “greater convenience, increased competition, and gains in efficiency.” *Id.*

315 § 225.13(a)(2). Moreover, the Board must consider whether the acquisition will meet the convenience and needs of the community, including its Community Reinvestment Act record performance, affected by the acquisition. § 225.13(b)(3).

320 See *Indep. Ins. Agents of Am., Inc. v. Bd. of Governors of the Fed. Reserve Sys.*, 658 F.2d 571, 574–75 (8th Cir. 1981) (“[T]he Board must carefully consider many factors under the public benefits test including, but not limited to, the precise manner in which the ‘de novo’ entry is to be affected, the dangers of undue concentration of resources, decreased or unfair competition, conflicts of interest and unsound banking practices.”); Alcalá, *supra* note 313, at 328 (discussing convenience, competition, and efficiency as public benefits to be considered). A federal study revealed that the Board consistently cited six types of public benefits:

- (1) improvements relating to convenience and needs of the community to be served,
- (2) increased competition,
- (3) improved operational efficiency,
- (4) expanded financial resources for the firm to be acquired and/or the holding company,
- (5) improved management for the acquired firm, and
- (6) other benefits unique to the particular case.

Michael A. Jessee & Steven A. Seelig, *An Analysis of the Public Benefits Test of the Bank Holding Company Act*, FED. RES. BANK OF N.Y., MONTHLY REVIEW, JUNE 1974, at 151.

example, Regulation Y, which mirrors the BHC, explains that the Board must determine “whether the notificant’s performance of the activities can reasonably be expected to produce benefits to the public (such as greater convenience, increased competition, and gains in efficiency) that outweigh possible adverse effects (such as undue concentration of resources, decreased or unfair competition, conflicts of interest, and unsound banking practices).”³²¹ Regulators rarely require much more than a cost-benefit type analysis of the bank itself to cross the public benefit hurdle. They rarely question whether a bank’s engagement in a particular activity actually benefits the public. Instead, the regulatory focus has been much more on profitability and has been aligned with the corporation’s own interest.³²² In other words, if an activity results in increased profits to the corporation, that alone is a significant benefit unlikely to be outweighed by negative public effects, such as decreased competition.³²³

My own review of hundreds of agency opinions, specifically related to BHC’s seeking merger approvals, from the 1970s until today, reveals that the public benefit test has become less searching over time. In the 1970s, I found examples of banks being denied merger approvals because the proposed merger did not meet public needs and convenience.³²⁴ The trend was also that regulators made a searching inquiry into the needs of the community and provided examples of how a specific merger would enhance the welfare of the community.³²⁵ After the enactment of the CRA in 1977, the focus of

The study further finds that, as of February 1974, only twenty-five orders of denials were published, and in the vast majority, the primary reason was reduction of existing or potential competition. *Id.* at 157–60.

322 See Alcaly, *supra* note 313, at 329, 331 (discussing the “superfluous” public benefits of convenience and efficiency while noting the correlation between profitability of banks and their ability to generate public benefits).

323 A 1977–1978 Federal Reserve survey concluded that it was difficult to demonstrate whether “the public interest standards of the act have fostered the public welfare significantly.” Anthony W. Cyrnak, *Convenience and Needs and Public Benefits in the Bank Holding Company Movement*, in *THE BANK HOLDING COMPANY MOVEMENT TO 1978*, at 263, 286 (1978); see also David R. Allardice, *Convenience and Needs Considerations: A Post-Audit Survey* 2–8 (Fed. Res. Bank of Chi., Research Paper No. 78-2, Sept. 1978); Joseph E. Rossman, Jr. & B. Frank King, *Convenience and Needs: Holding Company Claims and Actions* 1–2 (Fed. Res. Bank of Atlanta, Research Paper No. 2, May 1978).

324 *N. Shore Capital Corp.*, 58 Fed. Res. Bull. 809, 810 (1972) (denying BHC formation because public needs and convenience were already being met and because of concerns about over-leverage and mistreatment of minority shareholders).

325 See *W. Mich. Corp.*, 63 Fed. Res. Bull. 506, 508 (1977) (finding public benefits, including increased lending capacity, upgraded agricultural loan services, and new savings programs); *Tex. Commerce Bancshares, Inc.*, 58 Fed. Res. Bull. 984, 986 (1972) (holding that community benefit came from new services including petroleum financing services that the community currently lacked and needed); *First Ala. Bancshares, Inc.*, 57 Fed. Res. Bull. 404, 407, 411 (1971) (approving merger because community needs—such as the fact that Alabama was one of the least economically developed states—outweighed anticompetitive monopoly concerns).

the public benefit test shifted to ask whether the bank was in compliance with the CRA, which served as a rubber stamp for meeting the public benefit test.³²⁶ Regulators did consider whether there were serious anti-competitive concerns, but if those were not present, there was no inquiry as to *benefits* of the merger.³²⁷ When regulators did evaluate the actual public benefit, often the benefits were those that accrued to the bank, not the public.³²⁸ In one example, a merger involving the second-largest banking corporation in Minnesota was approved by the Federal Reserve, in the face of strong anti-competitive concerns, because of “the significant public benefit of *resolving the capital deficiency of an impaired institution* in a private transaction without cost to the federal deposit insurance funds.”³²⁹

In addition to the public benefit test being watered-down by contemporary regulators, it has been completely left out of major banking legislation during and after the deregulatory era. The GLB Act was the first major banking regulation that did away with any public benefit inquiry. The act was passed in 1999 after two decades of deregulation. The act does reinforce the CRA requirements for public benefit by codifying that nothing in the act changes these requirements.³³⁰ This last concession was a major sticking point in the legislation and was heavily contested, but written into the act in order to get it passed.³³¹ The compromise was that the GLB Act required the Federal Reserve and the Treasury Department to study whether these programs were generally *profitable*.³³² The Federal Reserve found that the majority (sixty-one percent) were generally profitable for large institutions.³³³

The Dodd-Frank Act also does not include a “public benefit” test anywhere in its text.³³⁴ It is possible that the new rules enacted by the agencies

326 See Nationsbank Corp., 1993 WL 741754 at *7–*8 (F.R.B. Aug. 2, 1993) (approving the merger application of the fourth-largest commercial bank in the U.S. where the public benefits test was satisfied through thorough examination of CRA ratings).

327 See Mercantile Bancorporation, Inc., 78 Fed. Res. Bull. 377, 378 (1992) (concluding that no anticompetitive concerns existed “that are not outweighed by the public benefits in this case” but identifying none of those benefits); see also Nationsbank, 1993 WL 741754 at *8 (finding, on a second matter, no anticompetitive concerns, and no discussion of public benefits).

328 See Citizens Fin. Grp., Inc., 71 Fed. Res. Bull. 473, 475 (1985) (“[Approval] will provide Applicant greater resources for expansion and greater flexibility for diversification of business activities [T]hus[, approval] should allow Applicant to *continue to compete effectively* with other large Rhode Island financial organizations.” (emphasis added)).

will add a public benefit component to Dodd-Frank. The act does, however, implement a new policy consideration under the BHCA cost-benefit analysis. Regulators must now also consider whether a merger or acquisition will create detrimental systemic risk to the financial industry and whether that risk outweighs any benefit expected from the merger or acquisition.³³⁵

In sum, the public benefit test was written into the banking regulator code during the New Deal era social contract and reinforced by the legislation that followed it, but has since been diluted or excised from new legislation. Just as safety and soundness became synonymous with profitability so too did the “public benefit test.” To show a public benefit, a bank need only prove that the proposed activity increases efficiency and competition, which do favor the public tangentially, but are not direct benefits. For example, in the lead up to the financial crisis, many banks started engaging in highly risky derivatives trading and bundling of Mortgage Backed Securities (MBSs) into tranches of Collateralized Debt Obligations (CDOs). These transactions, which were approved by regulators, increased efficiency and competition among banks; however, if the public need was considered seriously, it would have become apparent to the regulators that these transactions involved the now-infamous fraud and unscrupulous lending practices. These transactions may have increased profits for banks, but they were not beneficial to the public needs of safety and soundness, consumer protection, and access to credit.³³⁶

Although the public benefit inquiry has not been a demanding one, the charge still exists in banking legislation and provides an explicit mandate to regulators to use their authority to consider public needs. Regulators can and should take up this statutory charge and conduct a searching inquiry into whether certain changes in banking do actually benefit the public. The legislative history of most of these provisions support using them to demand that banking activities consider the effect on the public. This statutory authority should give regulators at least some greater capacity to push forward the public purpose notion that should be a central component of the social contract. Banks have duties to the state and the public and if a pro-

336 Although subprime lending did increase access to credit, it was not good credit or even credit that many were seeking. Many of these loans were originated to meet the demands of banks and not necessarily the demands of consumers. It was clear from the beginning of the crisis that it was Wall Street, not Main Street, demand that led to the glut of subprime lending. Toward the end of the crisis, banks were desperately seeking new customers to meet the demands of the insatiable CDO markets, which led to some of the most fraudulent actions by mortgage originators, such as no-doc loans, thin FICO file loans, and “liar loans.” *Enhancing Investor Protection and the Regulation of the Securities Markets: Hearing Before the S. Comm. on Banking, Housing, and Urban Affairs*, 111th Cong. 1 (2009) (statement of Lynn E. Turner), available at http://www.banking.senate.gov/public/index.cfm?FuseAction=Files.View&FileStore_id=16e2bab5-2d77-4f6e-a471-933a438f6cac.

posed activity has the potential to harm the public, that activity should be discouraged.

CONCLUSION

This Article makes the case that given the unique features of banks and their dependence on their sponsoring government, there is an implicit social contract between banks and the state. This social contract is supported by history as well as the legislative code. This Article lays out the contours of the historic social contract and proposes that the social contract of the future focus on three pillars: safety and soundness, consumer protection, and access to credit. Revising the social contract does not entail more, and certainly not more complex, regulation. What it does require is an understanding that banks are not like other corporations due to their relationship with their sponsoring state and the public safety net that enables their success and continued existence. This relationship should inform regulatory philosophy. Specifically, regulators should not look primarily at profitability when gauging safety and soundness, they should be concerned with strong protections of consumers, and they should engage the banking system in increasing access to credit to all citizens. Regulators should build on the “public benefit” tests incorporated in much of banking regulation to develop a new regulatory paradigm built on a reinvigorated social contract that will ensure banks meet the needs of the public in the years to come. Furthermore, they should ask whether a given bank proposal will increase safety and soundness of the system, protect consumers, and increase access to credit. Giving the “public benefit” test more meaning is just one step toward re-defining the social contract.
